Class II	Nitrate-Mixture
Class III	Nitro-Compound
Class IV	Chlorate-Mixture
Class V	Fulminate
Class VI	Ammunition
Class VII	Fireworks

And when an explosive falls within the description of more than one class, it shall be deemed to belong exclusively to the latest of the classes within the description of which it falls.

Class I.—Gunpowder Class.

The term “Gunpowder” means exclusively gunpowder ordinarily so called,

Class II.—Nitrate-Mixture Class.

The term “Nitrate-mixture” means any preparations, other than gunpowder ordinarily so called, formed by the mechanical mixture of a nitrate with any form of carbon or with any carbonaceous substance not possessed of explosive properties, whether sulphur be or be not added to such preparation, and whether such preparation be or be not mechanically mixed with any other non-explosive substance.

 The nitrate-mixture class comprises such explosives as :—

Pyrolithe,
Pudrolithe,
Poudre sexifragine,

and any preparation coming within the above definition.

Class III.—Nitro-Compound Class.

The term “Nitro-Compound” means any chemical compound possessed of explosive properties, or capable of combining with metals to form an explosive compound, which is produced by the chemical action of nitro acid (whether mixed or not with sulphuric acid) or of a nitrate mixed with sulphuric acid upon any carbonaceous substance, whether such compound is mechanically mixed with other substance or not.

The nitro-compound class has two divisions.

Division 1 comprises such explosives as :—

Nitro-glycerine,
Dynamite
Lithofracteur,
Dualine,
Glyoxiline,
Methylic nitrate,

and any chemical compound or mechanically mixed preparation which consists either wholly or partly of nitro-glycerine or some other liquid nitro-compound.

Division 2 comprises such explosives as :—

Guncotton ordinary so-called,
Gunpaper,
Xyloidine,
Gun sawdust,
Nitrated guncotton,
Cotton gunpowder,
Schultz's powder,
Nitro-mannite,
Picrates,
Picric powder,
Tonite (or cotton-powder),

and any nitro-compound as before defined which is not comprised in the first division.

Class IV.—Chlorate-mixture Class.

The term “Chlorate-mixture” means any explosive containing a chlorate.

The chlorate mixture class has two divisions.

Division 1 comprises such explosives as :—

Horsley's blasting powder,
Brain's blasting powder,

and any chlorate preparation which consists partly of nitro-glycerine or of some other liquid nitro-compound.

Division 2 comprises such explosives as :—

Horsley's original blasting powder,
Erhardt's powder,
Reverley's powder,
Hochstadter's blasting charges,
Richen's blasting charges,
Teutonite,
Chlorated guncotton,

and any chlorate-mixture as before defined, which is not comprised in the first division.

Class V.—Fulminate Class.

The term "Fulminate" means any chemical compound or mechanical mixture, whether included in the foregoing classes or not, which, from its great susceptibility to detonation, is suitable for employment in percussion caps or any other appliances for developing detonation, or which from its extreme sensibility to explosion, and from its great inscability (that is to say, readiness to undergo decomposition from very slight exciting causes), is specially dangerous.

This class consists of two divisions.

Division 1 comprises such compounds as the fulminates of silver and of mercury, and preparations of these substances, such as are used in percussion caps, and any preparation consisting of a mixture of a chlorate with phosphorus, or certain descriptions of phosphorus compounds, with or without the addition of carbonaceous matter, and any preparation consisting of a mixture of a chlorate with sulphur, or with a sulphurate, with or without carbonaceous matter.

Division 2 comprises such substances as the chlorate and the iodide of nitrogen fulminating gold and silver, diazobenzol, and the nitrate of diazobenzol.

Class VI.—Ammunition Class.

The term "Ammunition" means an explosive of any of the foregoing classes when enclosed in case or contrivance, or otherwise adapted or prepared so as to form a cartridge or charge for small arms, cannon, or any other weapon, or for blasting, or to form any safety or other fuze for blasting, or for shells, or to form any tube for firing explosives, or to form a percussion cap, detonator, a fog signal, a shell, a torpedo, a war rocket, or other contrivance other than a firework.

The term "Percussion cap" does not include a detonator.

The term "Detonator" means a capsule or case which is of such strength and construction, and contains an explosive of the fulminate-explosive class in such quantity that the explosion of one capsule or case will communicate the explosion to other like capsules or cases.

The term "Safety fuze" means a fuze for blasting, which burns and does not explode, and which does not contain its own means of ignition, and which is of such strength and construction and contains an explosive in such quantity that the burning of such fuze will not communicate laterally with other like fuzes.

The expression "Safety cartridges" means cartridges for small arms of which the case can be extracted from the small arm after firing, and which are so closed as to prevent any explosion in one cartridge being communicated to other cartridges.

The ammunition class has three divisions.

Division 1 comprises exclusively :—

Safety cartridges,
Safety fuzes for blasting,
Railway fog signals,
Percussion caps.

Division 2 comprises any ammunition as before defined which does not contain its own means of ignition and is not included in Division 1 such as :—

Cartridges for small arms which are not safety cartridges.

Cartridges and charges for cannon, shells, mines, blasting or other like purposes.

Shells and torpedoes containing any explosive, fuzes for blasting which are not safety fuzes,

Fuzes for shells,
Tubes for firing explosives,
War rockets,

which do not contain their own means of ignition.

Division 3 comprises any ammunition as before defined which contains its own means of

ignition and is not included in Division 1 such as;—

Detonators
Cartridges for small arms, which are not safety cartridges,
Fuzes for blasting, which are not safety fuzes,
Fuzes for shells,
Tubes for firing explosives,

which do not contain their own means of ignition.

By ammunition containing its own means of ignition is meant ammunition having an arrangement, whether attached to it or forming part of it, which is adapted to explode or fire the same by friction or percussion.

Class VII—Firework Class

The term “Firework” comprises firework composition and manufactured fireworks.

Division 1. The term “firework composition” means any chemical compound or mechanically mixed preparation of an explosive or inflammable nature which is used for the purpose of making manufactured fireworks, and is not included in the former classes of explosives, and also any coloured fire composition.

Division 2. The term “manufactured firework” means any explosive of the foregoing classes and any firework composition when such explosive composition is enclosed in any case or contrivance or is otherwise manufactured so as to form a squib, cracker, serpent, rocket (other than a war rocket), maroom, star, lance, wheel, chinese fire, roman candle or other article adapted for the production of pyrotechnic effects or pyrotechnic signals.

His Excellency the Governor deeply regrets to announce that further intelligence has been received confirming the report of the death of Captain Aylmer, Special, Service Officer, Northern Frontier District, on May 1st last, at the hands of a party of Tigré elephant hunters whom he was endeavouring in the execution of his duty to arrest.

Captain Aylmer joined the 3rd Battalion King's African Rifles in February, 1905, and was transferred in 1911 to the post he held at the time of his death. He was a most capable and gallant Officer, admirably fitted for outpost duties and exceedingly popular amongst his colleagues on the frontier, where his place will be difficult to fill.
