GENERAL NOTICE NO. 603

LOCUST REPORT, 3RD MAY, 1934.

KENYA.

The Red Locust.

Coast Province.—It is reported from Kwale that hoppers are now emerging in many parts of the district. Although they are being burned and beaten as they emerge, complete success cannot yet be anticipated; the extent of the infestation can only be gauged when hatchings are complete. A power spray unit is at work in this area, and a plentiful supply of poison bait is available for use as soon as feeding commences. It is expected that the appointment of a special locust officer will be found necessary to deal with the outbreak, but this step can only be decided upon after receipt of further and fuller reports.

Hatchings have also been reported in the Kilifi neighbourhood, it is not yet known whether this, at present, small infestation will spread over a wide area or is merely indicative of a few scattered emergences.

Hoppers have appeared in the vicinity of Voi near the railway, this hatching is on a small scale and is being dealt with locally by beating.

Masai-Machakos Area.—Reports from the Matuliko district confirm the opinion that large areas of the Emali-Keite River area are now infested with hoppers, which extend in a northerly direction to Mbuni and the Thwaki River. The increased area is being dealt with, with the assistance of the native chiefs who, however, still show a marked prejudice against the use of poison bait. In view of the plentiful supply of labour and of the broken and heavily overgrown nature of the country it is considered that the hoppers can be best controlled by beating and burning. By arrangement with the native chiefs certain areas have been selected for experimental baiting. These experiments will be closely observed and will, it is hoped, assist towards convincing the natives that no danger to their stock need be feared.

Small predatory birds are present in large numbers and the locust officer reports that a species of small black ant is attacking hoppers and eggs indiscriminately.

Swatting and burning have already practically exterminated all the older hoppers over a wide area, those remaining being under a week old, but it must be remembered that the number of hoppers is being increased daily by means of fresh hatchings.

A certain amount of damage has been done to native maize, wimbi, sugar cane and pumpkins, but no serious loss has to be recorded.

It is reported from the Laitokitok (S. Masai) district that though hatchings on a small scale have taken place they can, so far, be regarded as negligible.

Kisii-Sotik-Mara River Area.—The honorary officer in charge of the Mara River area reports further excellent execution in his district. Last week it was mentioned that the wide area of infestation east of the Mara River had been cleared up, and it is now satisfactory to learn that the situation from the Mara River to the Siria Escarpment has

also been dealt with and practically all hopper bands exterminated. From the Escarpment to the Kisii border and southwards to the Tanganyika boundary there still remains a heavy infestation to be combated, but it is hoped that in a few weeks' time the hatchings over the whole of this very extensive area will, under the direction of the above-mentioned officer, have been satisfactorily dealt with.

The hopper infestation in the Kisii district has spread to an unexpected extent and now covers an area of many hundreds of square miles, but from this it must not be understood that the whole affected area is covered with hoppers, but merely that scattered bands are to be found over the whole territory and that considerable daily hatchings are in progress. As it is essential, in view of the size of the infestation, that the hoppers should be brought under control at the earliest possible moment a special locust officer with full equipment has been despatched to co-operate with the local administration in the organization and conduct of a destruction campaign. While nothing definite can be said at present, and until full reports have been received from the officer in charge, it is feared that this infestation may prove to be of a serious nature; no effort will therefore be spared to cope with the menace. It is known that the infested area includes the whole of the eastern half of the Kisii Reserve and extends to Sotik and the Chepungu Forest, and it can be assumed that this infestation forms one complex with the Mara River Kisii border district.

General.—With the advent of what appear to be general rains, hatchings over large areas in all infested districts are being reported almost daily, and it is now reasonably certain that the menace is a serious one and that an extensive campaign will be required to deal with the situation.

UGANDA.

The following report has been received from Uganda:—

Somewhat greater numbers and activity of swarms was noticeable during March, owing to the presence of rain in small amount in various districts.

The northern districts remain almost free, only a few small swarms being reported.

The Central and Eastern districts showed larger numbers of swarms than during the previous few months, but only one or two of large size have been noticed.

All swarms are immature and no egg-laying took place during the month. This may be expected during the current month, but there is no reason for anticipating a heavy hopper infestation.

Further information has not been received regarding the red locust, and no recurrence of swarms or breeding of this species in the western districts seems to have occurred.

H. J. CARLISLE,
for Director of Agriculture.
