GENERAL NOTICE NO. 640

LOCUST REPORT, 10TH MAY, 1934.

KENYA.

The Red Locust.

Coast Province.—Emergences are still in progress in most areas and are reported from as far north as Kipini, and along the Tana River, where birds are reported to be doing good work near Golbanti. Heavy hatchings have taken place in the Kilifi area and a baiting campaign is being organized. Hatchings are also reported over a considerable portion of the Mombasa district, but the position there is not regarded as serious.

A special Locust Officer has been appointed to supervise the work in the Coast area, but his reports on the situation are not yet to hand.

Machakos-Masai Area.—Satisfactory progress is reported from Mataliko where all the first hatchings have been eliminated, but the irregularity of the rainfall has delayed hatchings in some parts and reports of fresh emergences are coming in daily. The experimental baiting on selected areas has proved very effective, the locust officer reporting that a 100 per cent kill was registered. Baiting operations will therefore be gradually extended to other areas, and it is hoped that it will be possible to announce shortly that the situation in the whole of the Machakos district is under control.

No further reports have been received from the Kajiado-Laitokitok country, but as it is anticipated that hatchings will have taken place scouts are being sent out to report any developments.

Kisii-Narok Area.—The control officer sent up to Kisii last week reports that the whole of the infested area is now under close supervision and that the work of destruction is progressing satisfactorily. Owing to the very wide extent of the scattered hatchings it has not yet been possible to investigate and report upon each district separately, but an adequate intelligence service is being arranged and every outbreak will be dealt with as soon as reported. An intensive destruction campaign is also now being conducted in the Kisii border-Mara River country, where it is anticipated that control will shortly be established.

Scouting operations in the Masai Reserve have revealed considerable hatchings between Narok and the Tanganyika border, some of the hoppers being in their fourth moult and therefore approaching the flying stage. Immediate steps have been taken to deal with these bands and further scouting expeditions have been organized to cover areas from which no reports have as yet been received.

General.—Daily hatchings continue in all districts and the campaign net-work is being gradually extended to cover each fresh emergency; all that can be said at present is that the general situation is no worse than last week.

TANGANYIKA TERRITORY.

Dar es Salaam reports numerous small flying swarms damaging young crops. Swarms continue to move northwards.

Bagamoyo.—Work continues against hoppers and flyers, and the northerly movement is marked. Weather conditions immobilize flyers long enough

for considerable destruction to be effected. A large swarm has arisen and is now in the region of Sadani, doing very little damage.

Tanga Province.—In the Jipe area considerable damage has been done to young cotton by hoppers, whilst in the Lushoto district no damage is reported and hoppers are confined to the plains. Muhesa hopper situation causing anxiety but energetic action proceeding. Handeni reports hopper damage negligible except in Kimbe, and flyers are appearing.

Northern Province.—Further hatching, reported from Uru, is being dealt with. The position in the Moshi district is greatly easier, whilst active operations are taking place in Sanya, Kibongoto and Kingori and concentrated action is there being taken.

In Arusha there are widely separated bands, work is being undertaken around Mondul. Hopper bands reported from various parts of Masailand show heavy natural mortality. Hoppers in Mbulu are found only near Oldeani. Escapes are anticipated from remote areas.

General.—The continuation of the rains and overcast skies in the Eastern Province has checked the movement of the small escape flying swarms. In the south movement may be anticipated as the weather clears, and unfortunately as expected the movement so far is in a northerly direction, which will bring these swarms up to the Usambaras in time. Immunity from serious damage for three weeks in the south will render the food crop situation secure, as also in the western and Lake Provinces. Continuation of the rains will provide natural green food for locusts for a lower period in the bush, thus lessening the risk to crops. So far as may be ascertained the flying swarms in the Territory to-day are very much smaller than at one time seemed likely.

H. J. CARLISLE,
for Director of Agriculture.
