Soil-Related Impacts	<ul style="list-style-type: none"> <li>The valuable top soil containing organic material, nutrients as well as seeds and the soil fauna to be excavated separately and piled in an adequate manner for re-use.</li> <li>After completion of the construction works the Contractor to ensure immediate restoration by spreading piled top soil and by sowing adequate grass.</li> <li>Put up erosion control measures such as gabions and gunny bags filled with soil where there are erosion signs to slow down storm water flow in these sections during heavy rains.</li> <li>Plan emergency response measures in case of accidental oil spills during construction.</li> </ul>
Impacts on land	<ul style="list-style-type: none"> <li>A site waste management plan to be prepared by the contractor. This should include designation of appropriate waste storage areas, collection and removal schedule and identification of approved disposal site.</li> </ul>

Impact on water  
resources

- Unusable construction waste, such as damaged pipes, formwork and other construction material, to be disposed of at an approved dumpsite or sold to willing buyers for salvage value.
- Proper solid waste receptacles and storage containers to be provided, particularly for the disposal of lunch and drink boxes so as to prevent littering of the site.
- Arrangements to be made for the regular collection of litter and for its disposal with the Local Council.

- The proponent to ensure proper maintenance of drainage system like regular cleaning to ensure smooth flow of the storm water and to avoid blockages and overflows especially during rainy seasons.
- Use silt or clay soils for pond foundations and construction as these soils won't allow the wastewater to quickly percolate down through the lagoon bottom to the groundwater.
- External slopes to be protected from storm water erosion by providing adequate drainage.
- Surface drainage or storm runoff to be kept out of the ponds, if necessary diversion terraces or drains should be installed above the site.

Sanitation Impacts

- Maintain good hygiene at construction camps.
- A site waste management plan to be prepared by the Contractor prior to the commencement of construction works. This should include designation of appropriate waste storage areas, collection and removal schedule and identification of approved disposal site.
- Unusable construction waste, such as damaged pipes, formwork and other construction material, to be disposed of at an approved dumpsite or sold to willing buyers for salvage value.

Impact on wildlife  
habitats and bio-  
diversity

- Re-plant the indigenous vegetation as much as is practical once work is completed.
- Spare the vegetation that must not necessarily be removed such as trees.
- Spilled cement or concrete should be collected and disposed away from storm water drainage.
- Maintain operations at the ponds clear of unwanted vegetation.
- The ponds are located away from the vicinity of any airports and no hazards are envisaged.

Odours, air pollution, air  
quality and noise  
impacts

- Anaerobic ponds have been satisfactorily designed, on the basis of volumetric BOD loading.
- The proponent (LVNWSB) to ensure proper operation and maintenance of the waste stabilization ponds.

- Maintaining high performance of biological treatment of waste water and chemical treatment of sludge.
- Restrict delivery of materials on the drier seasons.
- Construction sites and transportation routes to be water-sprayed on dry and windy days up to three times a day, especially if these sites are near sensitive receptors, such as residential areas.
- Vehicles and construction machinery will be required to be properly maintained and to comply with relevant emission standards.
- In the event that delivery trucks damage parts of the road, repair the spots in consultation with the local authorities.

#### ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED SHUKRAN PETROL STATION ON PLOT NO. 184/KAJIADO TOWNSHIP, COMMERCIAL ZONE, KAJIADO COUNTY

#### INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of Environmental (Impact Assessment and Audit) regulations, the National Environmental Management Authority (NEMA) has received an Environmental

Impact Assessment Study Report for the implementation of the proposed petrol station.

The proposed development entails construction of a petrol station to include; Four pump isles, Two underground petroleum storage tanks (UPSTs), A heavy duty covered man hole for each of the UPSTs, Mini market, Fast food restaurant, Car wash open to sky, Oil Interceptor, An acceleration section on Namanga Road, Air and water point, An office section, Sanitary facilities, A septic tank, A soak pit, Associated piping work, Compressor Generator Room

#### Possible Impact

#### Mitigation Measures

#### Land pollution

- Ensuring vegetative cover on unpaved surfaces to maintain the integrity of soil structure within the project area and where the vegetation has been destroyed landscaping shall be undertaken.
- Proper waste management (both solid and liquid) to avoid polluting the soil and unsightly environment.
- Ensure leaks are detected and repaired quickly.
- Construction of an Oil interceptor.

#### Air Pollution

- All fuel should be sourced from trusted sources that have employed the necessary steps to eliminate lead and reduce sulphur content.
- Selling of unleaded petrol.
- Selling of 0.05% sulphur diesel.
- Maintaining low dust levels during construction through either surfacing the non-surfaced portion of the road or/and water regions not paved. This will reduce the amount of dust generated.
- Installation of scrubbers on the exhausts of emitting machinery.
- Erection of screens and buffer fences (noise barriers) to reduce the amount of dust and noise generated during construction reaching neighboring utilities.
- Use of noise absorbent padding in fixed plant installations.
- Use of silencers/mufflers in Heavy Earth Moving Machines (HEMM).
- Use of ear-muffs by employees to reduce any exposure from noise.
- Retain and continue planting green-belts to create barriers between source and receiver this strategy is a long term measure as trees take a long time to be effective in creating noise barriers.
- Flower bushes and shrubs can be planted around noise emitting utilities.

#### Water pollution

- Ensure conservation of water in the construction phase through wise and only necessary use as well as recycling where applicable and appropriate Management of any liquid and solid wastes to ensure that they do not lead to the contamination of surface water in the nearby streams and the underground waters.
- Employing water catchments measures such as roof catchments where water harvested this way can be used for cleaning or lawn maintenance purposes.

## Hazards

- Maintaining vegetative cover within the non-paved area.
- Install low flush toilets.
- Hazards especially from moving vehicles and trucks in and out of the site could be handled in a number of ways.
- Erecting hazards warning signs.
- Using smaller trucks that make narrow turnings.
- Construct storm water drains to channel flood waters given the steep slope of the site.
- Keep the percentage of the area of impervious surface as low as possible to reduce runoff during storm periods.
- Ensure effective collection of litter generated at the site.
- Ensure strict adherence to occupational health and safety rules.

The full report of the proposed project is available for inspection during working hours at:
