THE ENVIRONMENTAL MANAGEMENT AND
CO-ORDINATION ACT

(No. 8 of 1999)

THE NATIONAL ENVIRONMENT MANAGEMENT
AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT
FOR THE PROPOSED REHABILITATION OF BERTHS 1-14 AT
KILINDINI HARBOUR WITHIN PORT OF MOMBASA IN
MOMBASA COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The Proponent, Kenya Ports Authority (KPA) with the support of Trademark East Africa (TMEA) intends to undertake rehabilitation, strengthening and deepening of Berths No. 1-14 located within the Port of Mombasa. The aim of the project is to upgrade these berths in order to accommodate the rapidly increasing cargo volumes and to provide efficient logistics services for the country and the neighbouring landlocked countries including Uganda, Rwanda, Burundi, Democratic Republic of Congo and Southern Sudan.

The proposed works would involve:

- rehabilitation of areas of the proposed berths that have cracks and exposed reinforcement and the construction of a new container terminal at berths 11-14 to gain an additional storage area of 60,000 m²;
- demolition and removal of existing infrastructure behind berths 11-14 and dredging to increase the water depth to 15 metres;
- construction of a drainage system with oil separators and sediment tanks and provision of utilities such as electricity and fresh water at the terminal area.

The following are the anticipated impacts and proposed mitigation measures:

Potential Impacts

Generation of suspended sediment during dredging would cause turbidity and impact negatively on water quality

Mitigation measures

- Careful choice of dredging period - Dredging should be done during the North East Monsoon when sediments would be propagated away from sensitive habitats.
- Reductions in the amount of suspended sediment through use of appropriate civil engineering technology such as use of silt curtains and use of a trailing suction dredger that sucks up sediments.

Accidental oil spills and discharge of ship waste from vessels during operation phase may affect critical habitats such as mangroves

- Implement IMO's shipping regulations as well as KMA's and KPA's port and shipping regulations to reduce probabilities of accidental oil spills.

Air pollution from dusty construction material at the project site as well as dust and particulate emission during transportation of construction material, demolition, excavation and ground levelling works

Air pollution as a result of emissions from ships, as well as emissions from container handling equipment and haulage trucks during the operations phase

Noise from on-site construction activities such as piling, haulage of material and mixing of concrete.

Potential rise in discharge of ballast water in the harbour due to increased shipping activities may increase the risk of introduction of invasive species

Expected increase in road traffic due to transportation of construction material at the construction phase and increased logistics traffic during the operations phase would cause congestion and increase likelihood of road traffic accidents

Potential decline in fish catches as a result of temporary displacement of fish from the dredging and disposal sites due to elevated levels of turbidity.

Potential rise in cases of communicable diseases such as HIV/Aids due to interaction with migrant workers

- Activate oil spill management systems such as National Oil Spill Response Contingency Plan in the event of spill.
