**THE NATIONAL ENVIRONMENT MANAGEMENT  
AUTHORITY**

**ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT  
FOR THE PROPOSED MZIMA II WATER PIPELINE IN TAITA  
TAVETA COUNTY**

**INVITATION OF PUBLIC COMMENTS**

Pursuant to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Coast Water Services Board, is proposing to construct Mzima II Water Pipeline in Taita Taveta County. The Project involves funding, design and construction of 220km of diameter 1,200mm pipeline and related appurtenances capable of transmitting 105,000m<sup>3</sup>/d of water from Mzima Springs to various coastal region towns in Taita Taveta, Kwale, Kilifi and Mombasa counties.

The following are the anticipated impacts and proposed mitigation measures:

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Habitat loss, degradation and fragmentation	<ul style="list-style-type: none"> <li>• Restrict the operations relating to installation of the new pipeline to the existing pipeline wayleave.</li> <li>• Restore cleared areas as soon as the pipes are installed and ensure landscaping to minimize soil erosion.</li> <li>• Earthworks in ecologically sensitive areas including steep hillsides and river crossings need to be carried with great caution.</li> <li>• Leveling and replanting and should be made mandatory.</li> </ul>
Interference with wild animal distribution and ranging patterns	<ul style="list-style-type: none"> <li>• Use of less noisy machinery and equipment.</li> <li>• Use of minimal number of vehicles and other equipment in the national parks.</li> <li>• Using an optimal workforce.</li> <li>• Worker's camps should be located outside the national park.</li> </ul>
Human wildlife conflicts	<ul style="list-style-type: none"> <li>• Reducing the human footprint associated with water pipeline will be limited through controlling the number of workers allowed project site during the implementation, operation and decommissioning phases.</li> <li>• At the beginning of the project, the workers will need to be briefed on the dangers they will be exposed to while working in wildlife habitats. They will be educated on how best to behave and protect themselves from dangerous animals.</li> <li>• The workers should be accompanied by armed KWS rangers while working in the parks and other wildlife rich habitats.</li> </ul>
Interference with tourism activities	<ul style="list-style-type: none"> <li>• It will be crucial that the work at these sites be carried out as fast as possible and with as minimal impacts on biodiversity and aesthetics as possible.</li> <li>• Pipeline trenches and other excavated sites should be covered as soon.</li> </ul>

*Impacts*

Increased poaching of wild animals

*Proposed Mitigation Measures*

- Where practical, most of the work should be timed to coincide with low tourism season/time of day.
  - Security agencies including Kenya Wildlife Service (KWS) should increase anti-poaching effort.
  - Avoiding establishment of workers' camps inside the parks and other wildlife rich habitats, in the area and minimizing human traffic within the area of operation.
  - Enlisting the support of local community in anti-poaching activities.
  - Sensitization of the workers and members of public on the importance of wildlife conservation, wildlife legislation particularly of the new the Wildlife Act 2013 (GOK, 2013), which has legislated very stiff penalties for wildlife poaching especially when endangered species are involved.
  - Vetting, screening and profiling of the construction workers to streamline management of people involved in construction. This will ensure that only people with no criminal records are allowed in the park.
  - The workers should be accompanied by security officers as part of the park regulation of ensuring their safety and wildlife.
  - Strict observance of Park Rules and Regulations.
  - Inspection of all construction vehicles entering and or leaving the protected areas of Tsavo National park.
  - Creating a single manned entry and exit for construction workers and vehicles where the pipeline exits Tsavo West. The same case should apply for Tsavo East.
  - Embedding KWS personnel to the Resident Engineer's (RE) Office to ensure that the Contractor does not operate in any way that is prejudicial to conservation of flora and fauna in Tsavo East and West.
- Water pollution
- Sanitation facilities shall be located within 100m from any point of work, but not closer than 50 m to any water body.
  - All temporary/portable toilets shall be secured to the ground to prevent them toppling due to wind or any other cause.
  - Only approved portable toilets should be used.
  - These facilities shall be maintained in a hygienic state and serviced regularly.
  - The contractor shall ensure that no spillage occurs when the toilets are cleaned or emptied and that the contents are removed from site to an approved disposal site.
  - Discharge of waste from toilets into the environment and burying of waste is strictly prohibited.
  - Wash areas shall be placed and constructed in such a manner so as to ensure that the surrounding areas, which include groundwater, are not polluted.

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>	<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Soil erosion and contamination	<ul style="list-style-type: none"> <li>Containers of chemicals and hazardous substances used on the sites should be confined in secure holding areas before disposal to approved sites by licensed waste handlers.</li> <li>Limit clearance of vegetation only on the way leave as much as possible to minimize exposure of soil to agents of erosion.</li> <li>Put up barriers to protect soil from erosion along the pipeline route where there are steep edges.</li> <li>Service machines, vehicles and heavy equipment to ensure there is no spillage of oil and greases during operations.</li> <li>Labelling all hazardous substances and providing work instructions in their use.</li> </ul>	Disturbance of traffic and difficulty of access	<ul style="list-style-type: none"> <li>Develop and implement a noise management plan.</li> <li>Install acoustic enclosures and silencers in the main plant.</li> <li>Install efficient and super silent power generators.</li> <li>Ensure livestock yards are supplied with adequate food to minimize animal noise.</li> <li>Comply with EMCA (Noise and Excessive Vibration Pollution Control) Regulations, 2009.</li> <li>Traffic department should approve crossing plan prior to construction, and should approve obstruction times during construction.</li> <li>Access of residents should be facilitated by installing appropriate temporary bridges over the pipeline trenches.</li> <li>Suitable warning signs should be placed at near locations and should be visible at night.</li> <li>A guard should be available 24 hours to help people access across pipeline trenches.</li> <li>Alternatives access ways should be communicated to the community.</li> <li>Provide Marshalls to assist the elderly, school children, expectant mothers and Persons With Disability (PWDs) cross the trench.</li> </ul>

### ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED YAMO DAM IN MARALAL TOWN OF SAMBURU COUNTY

#### INVITATION OF PUBLIC COMMENTS

Pursuant to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Northern Water Services Board, is proposing to develop Yamo Dam in Kirisia Ward, Samburu County. The dam is to be located in the gazetted Lpartuk Forest at an altitude of about 2,100 masl with an estimated catchment area of 30 km<sup>2</sup>. Water is expected to flow by gravity to Maralal Township which is at an average elevation of 1,940.

The following are the anticipated impacts and proposed mitigation measures:

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Air quality	<ul style="list-style-type: none"> <li>• Maintain construction equipment at high operational conditions such as to control emissions into the air.</li> <li>• Earth moving be done under dump conditions as much as possible to prevent emission of dust into the air.</li> <li>• It will be necessary to notify the immediate neighborhoods on the potential odors during the excavations.</li> <li>• The period should, however, be kept as short as possible (odors generation may not be fully eliminated during the period).</li> </ul>

<i>Impacts</i>	<i>Proposed Mitigation Measures</i>
Noise and excessive vibration	<ul style="list-style-type: none"> <li>• Strict adherence to Air Quality Regulations, 2014.</li> <li>• Conduct periodic noise measuring and monitoring to determine levels and extent of harmful noise.</li> <li>• Provide PPE (hearing protection) to persons operating within or visit identified high noise areas.</li> <li>• In order to meet noise level requirements, the equipment's should be equipped with standard noise attenuation features. Machines that exceed acceptable noise limits should be equipped with silencers or lagging materials or specially designed acoustic enclosures.</li> <li>• Inform local residents when construction activities are likely to generate excessive noise in order to minimize disruption to local residents.</li> <li>• Comply with EMCA (Noise and Excessive Vibration Pollution Control) Regulations, 2009.</li> </ul>
Water quality	<ul style="list-style-type: none"> <li>• Isolate solid wastes disrupted from the works during excavations for safe disposal. The wastes should be collected and disposed in approved sites.</li> <li>• Earth moving and excavations for the construction are carried out considering safety of the river and surface drainage. Control siltation of rivers and other surface drains.</li> <li>• Ensure spilt oil does not discharge into water sources.</li> <li>• Provide oil spill containment including concrete platform for servicing of construction equipment and holding of scrap oil drums.</li> </ul>
Interference with drainage and hydrology within Project site	<ul style="list-style-type: none"> <li>• Excavated channels to follow natural water course to avoid interference with surface drains.</li> <li>• Whenever necessary, drains along the construction line are directed towards existing drainage systems to cater for storm water during the rains. However, construction should be carried out during a dry season and should take the shortest period possible.</li> <li>• Utilize excavated soil to level excavated ground where necessary and cover the water pipelines that will have been laid in the ground.</li> <li>• There should be due adherence to the safest maximum abstract able water quantities throughout the project life.</li> <li>• Adhere to WRMA water use permits.</li> </ul>
Interruption of existing infrastructure	<ul style="list-style-type: none"> <li>• Formal request for permission to cross, break in and lay the pipelines should be sought from affected property owners; and</li> <li>• A work plan with clear responsibilities for each party should be developed to ensure smooth execution of the construction.</li> </ul>
Solid waste generation	<ul style="list-style-type: none"> <li>• A site waste management plan should be prepared by the Contractor prior to commencement of construction works. This should include designation of appropriate waste storage areas, collection and removal schedule and identification of approved disposal site.</li> </ul>

*Impacts**Proposed Mitigation Measures*

Spread of communicable diseases and HIV/AIDS infection

- Ensure that the solid waste collection, segregation, and disposal system is functioning properly at all times during the construction phase.
- Recycle and re-use wastes where possible such as scraps metal.
- Develop appropriate training and awareness materials for Information, Education.
- Develop an intervention strategy compatible with the construction programme to address success of the HIV/AIDS prevention and provide peer educators for sustainability in collaboration with other stakeholders.
- Integrate monitoring of HIV/AIDS preventive activities as part of the construction supervision. Basic knowledge, attitude and practices are among the parameters to be monitored, and particularly on provision of condoms, status testing and use of ARVs.

Occupational health and safety

- Establish a Health and Safety Plan (HASP) for civil works areas ensuring the working hours are controlled and that employees are not allowed to extend the working hours beyond an acceptable limit for purposes of gaining extra pay.
- Provision of adequate sanitary facilities to workers.
- Install safety signage along the work areas.
- Provide workers with gloves, ear gears, sturdy rubber boots and overalls to protect their skin from the effects of cement.
- Provide workers training on safety procedures and emergency response such as fire, first aid and water pipe burst incidences.
- Ensure adherence to OSHA, 2007.
