Inquiry into Allegations of Fraudulent Acquisition and Irregular Allocation of Unalienated Land in Nairobi South "C" Estate

The Commission received an anonymous report that a city tycoon had commenced construction of a Multi-Storey building in a wetland designated as public land in South "C" Estate.

Investigations revealed that the land; Nairobi/Block 103 was located within a residential scheme. That the said block consists of 792 plots subdivided from L.R. 209/10282, L.R. 209/12175 and L.R. 209/11141. Investigations further reveals that Nairobi/Block 103/793 was not allocated any use and neither did it exist in the survey plan records.

Investigations reveals that on the 20th September, 2012, a 99 years' certificate of lease for parcel Nairobi/Block 103/793, measuring approximately 0.2108 Ha was issued. Investigations further established that the lease certificate was issued on the basis of a part development plan purportedly signed by a senior planner and a letter of allotment purportedly by the then Town Clerk. Investigation further reveals that the ground visit and computation i.e. survey work, was done by the county licensed surveyor while the Amended Registry Index Map(RIM) was done at the Survey of Kenya.

The commission commenced investigations following a complaint that in 2018/2019 Financial year, the Tharaka Nithi County Government irregularly procured a solid waste incinerator at KSh. 40,000,000/-.

Investigations established that the procurement process was initiated without the NEMA license or the Bill of Materials which resulted in the County acquiring the solid waste incinerator at an inflated price of KSh. 34,998,500/-. Investigations further established that the tender process was flawed and further that Generation Electronic & Allied Ltd, a company owned by a relative to the Governor, Tharaka Nithi County, bought and imported the solid waste incinerator. Evidence further pointed at a case of money laundering by the Westomaxx Investment Ltd directors who signed a contract after submitting a forged performance bond from Madison Insurance. Investigations established that the Tharaka Nithi County Assembly had advertised for expression of interest for consultancy services for architectural designs on 23rd January, 2014. THE ENVIRONMENTAL MANAGEMENT AND
CO-ORDINATION ACT

(No. 8 of 1999)

THE NATIONAL ENVIRONMENT MANAGEMENT
AUTHORITYENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT
FOR THE PROPOSED DEVELOPMENT OF JEVANJEE
AFFORDABLE HOUSING ON PLOT NO. L.R. 209/5458 ALONG
QUARRY ROAD, NAIROBI CITY COUNTY

INVITATION OF PUBLIC COMMENTS

Pursuant to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Nairobi Bachelors Jevanjee Estate Limited, is proposing the construction of development of apartment's project which is part of the Government's effort to provide low cost housing for its citizens. The project as conceptualized will comprise Government social housing scheme allocated 65% of units and private, low-cost housing units that is allocated 35% of the units. The proposed project will be situated on an 8.87 acre piece of land on plot L.R. No. L.R. No. 209/5458 Nairobi with a total of 1,800 units as follows: 12no block of flats, of which 7no are social housing, 4no blocks market type low-cost housing and 1no commercial block. Each of these flats will have ground floor and 14no floors high. The design has presented a mixture of one, two and three bedroom units as follows: Social housing will consist of 117 units one-bedroom 585 units two-bedroom and 468 units 3 bedroom, a mix that totals 1,170 representing 65% of the project housing; and private affordable housing will consist of a mixture of 378 units two-bedroom and 252 units three bedrooms. That gives a total of 630 units representing 35% of the project housing. This is tabulated below.

The following are the anticipated impacts and proposed mitigation measures:

Activity/Impact	Proposed Mitigation Measures
Statutory requirements	The developer shall ensure that all pertinent permits, certificates and licences have been obtained and maintained in a database prior to any activities commencing on site and are strictly enforced/ adhered to for the construction period.
Seeking approvals and permits from relevant bodies	

Activity/Impact

Proposed Mitigation Measures

Vegetation and site clearance, soil erosion and sedimentation

Relocate or reroute any infrastructure facilities within the site.

- Adopt selective de-vegetation that aims at clearing only the project site where necessary avoiding unnecessary felling of existing trees.
- The developer proposes to carry out landscaping of the area as the project progresses.
- Once the project lifespan ends at decommissioning, the proponent then shall restore the land with vegetative cover.

Air quality control

[Increase in airborne/ air emissions (vehicular exhausts), paint emissions (Volatile organic compounds, VOC), and dust emission from paved and non-paved areas.]

All construction machinery shall be maintained and serviced in accordance with manufacturer specifications.

Vehicles delivering soil or dusty materials shall be covered to reduce spills and windblown dust.

Screening/hoarding of the construction site to contain and arrest construction-related dust.

Dust suppression with water-sprays during construction phase on non-paved areas.

Monitoring and measurement of dust levels at regular intervals during construction phase.

Solid wastes removals and disposal

A site waste management plan will be prepared by the contractor prior to commencement of construction works. This should include designation of appropriate waste storage areas, collection and removal schedule and identification of approved disposal site.

The project developer must ensure that collection bins/ receptacles are placed at strategic locations within project site as collection centres to facilitate separation and sorting of various types of wastes for reuse or recycling.

Contract a licensed waste handler to collect solid wastes which cannot be reused at the site.

Occupational health and safety

Nominate an environment, health and safety officer to oversee all construction related safety activities during project implementation process.

The developer must observe safe use of chemicals, electricity, plant, machinery and equipment at the site.

The developer must undertake all statutory trainings related to worker safety such as firefighting and first aid.

An emergency response plan in case of fire, accident and injury, trench and wall collapse will be developed prior to start of construction activities.

Provide adequate protective gears to construction workers.

<i>Activity/Impact</i>	<i>Proposed Mitigation Measures</i>	<i>Activity/Impact</i>	<i>Proposed Mitigation Measures</i>
Noise and excessive vibrations	• Limit the times of construction to daylight hours (8 a.m.-5 p.m.). • Erect signage to prohibit unnecessary hooting at the project site. • Ensure that noise and excessive vibration from construction activities are within permissible levels as per the provision of Environmental Management and Co-ordination (Noise and Excessive Vibration Pollution) (Control) Regulations, 2009. • Carry out baseline noise monitoring within the area before, during and after the construction works.		• Avail contraceptive dispensers at the site to the construction staff and the latter occupants. • Identify other players (local CBOs, NGOs, and government organizations) on HIV/AIDS for enhanced collaboration. • Prohibit drug abuse within the project site.
Surface drainage wastewater, and water pollution/ contamination	• Ensure that hazardous materials are handled and stored appropriately, to limit their movement into the environment. Hazardous liquids must be banded. • Stockpile of construction materials i.e. sand, ballast, stones etc. be placed away from drainage system and covered with tarpaulin at all times. • Monitor the natural flow system during heavy rains by making improvements where necessary and monitor drainage at construction material storage areas to prevent effects of soil erosion and surface run-offs. • Clear all soil residues/debris after trenching works. • Install effluent interceptors before final disposal into the sewer system at the vehicle and machine maintenance areas. • Wastewater shall be managed through proper disposal into Nairobi City Water and Sewerage Company Limited's sewer line serving the project area.	Security and crime	• Sensitize construction workers, locals and security on risks related to construction sites and to be on the lookout on suspicious activities near the site. • Proper design incorporating lighting to enhance security. • Liaise with the administration units such as the police and local administration to provide regular surveillance and patrols to protect workers and the neighborhood. • Body and vehicle search workers on entry, to avoid getting weapons on site and upon leaving site, ensure nothing is stolen. • Ensure only authorized personnel get to the premise. • Ensure security management systems are installed.
Water use and increasing demand	• Conduct regular water system inspections and audits to identify and rectify any possible water leakages. • Rain water harvesting infrastructure and borehole drilling as additional sources of water will be incorporated to reduce pressure on the existing water source. • Re-use or use recycled water e.g. from the interceptor for dust suppression construction of separate storm water and waste water drain. • Implement water saving devices in the ablution block use e.g. dual flush toilets, automatic shut-off taps, etc. • The designs have water reservoirs for storage.	Traffic snarl-up and access to construction site	• Provide reflective road signs on both sides of the working area at a distance not less than 50m from the works. • Rehabilitate the access road to accommodate both vehicular and non-vehicular traffic expected in the area. • Developer will develop and implement a traffic management plan to mitigate against possible accidents.
Irresponsible social behavior HIV/AIDS prevalence and drug abuse within the project area	• Conduct sensitization to the staff and community on drug abuse, irresponsible sexual behaviors, HIV and AIDS, stress management, and voluntary counseling and testing.	Environmental training and awareness	• The developer and sub-contractors shall be aware of the environmental requirements and constraints on construction activities. • The developer will be required to provide for the appropriate environmental training and awareness to workers especially held prior to any work commencing on site, with the target audience being all project workers.
		Increased energy demand	• Install meters for monitoring purposes • Use energy saving electricals such as LED-bulbs. • Use solar energy especially during operation phase as per the Solar Water Heating Regulations, 2012. • Sensitize workers and occupants on energy conservation.
		Increased social conflict and security	• Accommodate the views raised during stakeholder meetings. • Post emergency and SOS numbers strategically throughout the project lifecycle.

<i>Activity/Impact</i>	<i>Proposed Mitigation Measures</i>
	Encourage formation of community policing and formation of neighborhood associations e.g. "nyumba kumi"

THE ENVIRONMENTAL MANAGEMENT AND CO-ORDINATION ACT

(No. 8 of 1999)

THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED SABOR IRRIGATION FLOOD FLOW-WATER SUPPLY TRANSMISSION AND DISTRIBUTION LINES, UASIN GISHU COUNTY

INVITATION OF PUBLIC COMMENTS

Pursuant to regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, National Irrigation Board proposed to construct flood flow- water intake, install water transmission/conveyance pipelines, distribution lines, domestic water pans and infield irrigation systems. The project anticipated to cover 175 acres of land and to benefit about 700 farmer households in Tembelio Location, Moiben Constituency in Uasin Gishu County.

The following are the anticipated impacts and proposed mitigation measures:

<i>Activity/Impact</i>	<i>Proposed Mitigation Measures</i>
Air pollution due to dust generation and exhaust emissions	- Maintain vehicle and equipment according to manufacturers' specifications. - Use standard fuel and lubricants. - Avoid unnecessary car idling and switch off engines of vehicles and machinery while not in use.

<i>Activity/Impact</i>	<i>Proposed Mitigation Measures</i>
	- Sprinkle water to work areas to reduce and prevent dust during dry weather periods. - Clean access routes in surrounding area on a daily basis to prevent dust. - Collect and hold cleaning wastes (e.g. rags) in appropriate containers. - Workers who may unavoidably have to work in dusty workplaces should be provided with nose and ear masks to protect them from excessive dust.
Noise pollution and excessive vibrations during construction	- Minimize noise according to NEMA, Kenyan standards and guidelines. - Control noise and vibration on site; - Work programmes should be provided to local communities (e.g. through the local radio (FM) stations) and strictly followed. - Maintain vehicle and equipment according to manufacturers' specifications. - Install adequate noise prevention devices, e.g. mufflers on noise generating sources. - Switch off engines of vehicles and machinery while not in use. - Workers who may unavoidably have to work with noise generating equipment, e.g. earthmoving equipment should be provided with ear plugs and advised to put them on.
Water and soil pollution	- No solid waste, fuels or oils should be discharged into surface water bodies. - The contractor following the guidelines for management of materials and wastes during construction and operation should take care of preventing the project from damaging the surface water bodies. - Hold and store cleaning wastes in appropriate containers to be disposed of at approved sites. - Vehicles should preferably be parked on paved platforms. - Fuel storages should not leak, and should be periodically monitored, and repaired or replaced when necessary. - Maintain fuel and clean vehicles and equipment at workshops/sites with adequate leakage prevention (e.g. impermeable surface, settlers and oil separator).
Soil erosion and contamination	- Remove and store topsoil in separate piles and reinstate after refilling of trenches, to enable natural re-vegetation. - The contractor(s) should present procedures for, and ensure implementation of measures to protect soils from any accidental or structural contamination.

<i>Activity/Impact</i>	<i>Proposed Mitigation Measures</i>	<i>Activity/Impact</i>	<i>Proposed Mitigation Measures</i>
	- Storing all hazardous, sanitary and cleaning wastes in facilities approved by NEMA. - Installing leak-proof fuel storages on concrete platform with gutters and grease separators, which are monitored periodically and repaired or replaced when required. - Strict enforcement and monitoring standard procedures for storing and handling hazardous wastes and raw material (e.g. fuel or chemicals). - Placing strong drums for oil storage on impermeable floors in the stores. - Parking vehicles on paved platforms whenever possible. - Ensuring that sites for cleaning, fueling and maintaining equipment and vehicles should be able to prevent leakage (e.g. paved or with settlers). - Isolating contaminated soil and treating /disposing it off in a way that will depend on the contaminant type.		Restore disturbed natural sites through environmental rehabilitation; restoring top soils and (re-)introduce genetic species similar to those destroyed in order to re-establish the natural local ecology.
		Public Safety	- Ensure that work sites (especially excavation works), have proper protection with clear marking of safety borders and signals and fence off all dangerous areas. - Inform neighbours about the construction programme in advance and adhere to it. - Confine access to restricted work sites (including those with operation of mechanical and electric equipment) to persons with permits. - Implement appropriate traffic plans with the help of local police when (partial) closure of roads is required.
Solid waste generation	- The contractor should prepare a Solid Waste Management Plan, which should contain – - An inventory of the types and quantities of waste to be produced; - The most appropriate waste management approach for each type of waste including details on (temporary) storage, transport and final destination of the waste. - An assessment of any opportunities for reducing solid waste generation, in particular of hazardous and undesirable (persistent and non-reusable) types of wastes. - The contractor should maintain records of types, quantities, origin, (temporary) storage, transport and elimination/reuse of solid waste, and make these available to the works supervisor upon his request, as proof of proper waste management practices. - Any waste including excess soil should be disposed of at gazetted sites. The solid waste shall not accumulate on site, to cause odour, fly, or rodent problems. - Excavated soils should be reused as much as possible as filling material and should be contained after excavation. - Provisional material storage on site should be designed and undertaken in such a way as to ensure that soils and underground water are not polluted. - Use licensed recycling companies to externally recycle, recover or dispose of waste.	Public health problems including increased vehicular traffic	- Fill up all depressions to avoid pools of stagnant water may form in pits, holes and excavated ditches which can create suitable habitats for insect disease vectors such as mosquitoes which cause malaria. - Inform local communities about the construction programme in advance; - In case access roads have to be closed, inform local communities and road users in advance. - Use reflective signature to direct traffic to designated areas. - Use flag men/women to give directions to traffic. - Sensitize drivers to observe speed limits.
		Raw material use	- Consider environmental performance of suppliers of raw material in the selection process. - Explore ways of reducing raw material use. - Special emphasis should be made on raw materials that may be reused and/or recycled/recovered.
Impacts on flora and fauna	Zone out working areas to reduce ecological destruction.	Occupational health and safety	- Ensure that work sites (especially excavation works), especially in the night have proper protection with clear marking of safety borders and signals and fence off all dangerous areas. - Carry out training of staff in EH&S monitoring and evaluation. - The contractor should recruit H&S person during construction. - Inform neighbours about the construction programme in advance and adhere to it. - Confine access to restricted work sites (including those with operation mechanical and electric equipment) to persons with permits. - The contractor will ensure clear human resources policy against sexual harassment that is aligned with national law.

Activity/Impact	Proposed Mitigation Measures	Activity/Impact	Proposed Mitigation Measures
