THE ENVIRONMENTAL MANAGEMENT AND CO ORDINATION ACT

(No 8 of 1999)

THE NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY

ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED MAU MAU ROAD PROJECT AND ASSOCIATED SPUR ROADS THAT TRAVERSES THROUGH NYERI KIAMBU MURANG A AND NYANDARUA COUNTIES

INVITATION OF PUBLIC COMMENTS

PURSUANT to regulation 21 of the Environmental Management and Co ordination (Impact Assessment and Audit) Regulations 2003 the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project

The proponent Kenya National Highways Authority proposes to upgrade the Mau Mau Road Projects and several associated spur roads namely Lot 1 Kiambu Section Lot 2 Muranga Section Lot 3 Nyeri Section Thika-Magumu and Njabini-Kinyona-Kimakia Njabini Road Project

The following are the anticipated impacts and proposed mitigation measures

Possible Impacts Proposed Mitigation measures

Design and Construction Phase

Topography and geology

Slope gradient maintenance and controlled borrow pits and quarry excavation to avoid vertical phases

Erosion control measures in excavated borrow pits areas and working sites along the road

Site reclamation or rehabilitation during decommissioning phase of the project

Noise pollution and vibrations

Sensitize drivers of construction vehicles and machinery operators to switch off engines or machinery that are not being used

#### Possible Impacts

**Proposed Mitigation measures** 

- Ensure that all vehicles and construction machinery are kept in good condition all the time to avoid excessive noise generation
- · Ensure that all workers wear ear muffs and other personal protective gear/equipment when working in noisy sections
- · Ensure machines are switched off when not in
- Undertake loud noise and vibration level activities during off peak hours during the day (i.e between 8 00 a m and 5 00 p m)

## dust generation and air emissions

- Air pollution due to . Sprinkling of water on dry and dusty surfaces regularly including the access roads
  - Use of waste water to sprinkle at the construction site to reduce excessive dust
  - Adherence to personal protective clothing such as dust masks
  - · Enforce onsite speed limit regulations
  - Ensure machines and vehicles are properly and regularly maintained
  - Erection of speed calming measures near public institutions such as schools hospitals and town centres

## Solid generation

- Maximizing the rate of recycling of road resurfacing waste either in the aggregate (e.g. reclaimed asphalt pavement or reclaimed concrete material) or as a base
- Incorporating recyclable materials to reduce the volume and cost of new asphalt and concrete mixes
- Contracting of an ordinary waste and hazardous waste handler to collect and appropriately dispose wastes from camp sites
- Collecting road litter or illegally dumped waste and managing it according recommendations in the General EHS guidelines
- Provision of bottle and can recycling and trash disposal receptacles at parking lots to avoid littering along the road
- · Grinding of removed old road surface material and re use in paving or stockpiling the reclaim for road bed or other uses (Thika -Magumu-Njabini) Old removed asphalt may contain tar and polycyclic aromatic hydrocarbons and may require management as a hazardous waste Develop and implement a Construction Waste Management Plan before start of the project

## and consumption

- Water abstraction Install water conserving taps and toilets
  - Drainage structures that will be constructed cross culverts at the river courses be at appropriate positions
  - · Stone pitching and side drains to cover meaningful lengths along the prone protection
  - · Timing of the construction of proposed bridges to coincide with dry periods when water levels in the rivers are low to avoid possible water pollution
  - Contractor to avoid dumping of waste materials within the riparian zones/ within the watercourses
  - · Bitumen trucks should be washed at designated areas only

## Possible Impacts

Soil erosion

**Proposed Mitigation measures** 

Ensure surface runoff generated on impervious surface is not channeled directly to steep

- · Provide grassed water ways along the access
- Construct flow breaks on roadside drainage channels

The contractor will source building materials such as gravel sand ballast and hard core at the project locality

· Consultation should be held with the community members and their representatives on the best sites to source materials and rehabilitation measures should be agreed

All exhausted quarries and borrow pits should be isolated protected and rehabilitated to usable state before the contract closure

#### Loss of vegetation cover biodiversity

Siting roads and support facilities to avoid critical terrestrial habitat by utilizing existing transport corridors

Minimize clearing and disruption of riparian vegetation

Provide adequate protection against scour and erosion and consider the onset of the rainy season with respect to construction schedules

Minimize removal of indigenous plant species and replant indigenous plant species in disturbed areas

Explore opportunities for habitat enhancement

#### Health aspect

Develop a comprehensive STDS HIV and AIDs awareness and control programmes such as provision of condoms to workers both male and female

Creation of awareness of STDs HIV/AIDS in workers camps through trainings installation of posters

Adhere to and implement the Sexual Offences Act 2006 and its amendment 2012

### Road safety

Avoid long traffic diversion roads

· Water diversions to ensure dust is minimized hence easier visibility for drivers

Ensure Installation and maintenance of all construction signs signals markings and other devices used to regulate traffic including posted speed limits warnings of sharp turns or other special road conditions

- Advance information on communication systems will be an advantage to users
- Make traffic circulation changes as per the Traffic Act Cap 403

#### Occupational health and safety

Development of a transportation management plan for road construction that includes measures to ensure work zone safety

Establishment of work zones to separate workers on foot from traffic and equipment by routing of traffic to alternative roads

· Use protective barriers to shield workers from traffic vehicles regulation of traffic flow by warning lights design of the work space to eliminate or decrease blind spots and ensure reduction of maximum vehicle speeds in work zones

Possible Impacts

Proposed Mitigation measures

- Training of workers in safety issues related to their activities
- Ensure safe practices for work at night and in other low visibility conditions including use of high visibility safety apparel and proper illumination for the work space
- Barricade the area around which elevated work is taking place to prevent unauthorized access
- Use of the correct asphalt product for each specific application and ensuring application at the correct temperature to reduce the fuming of bitumen during normal handling
- Training on correct PPE use and provision of adequate PPEs

Possible displacement people

- Relocate all facilities affected in consultations of with various parties affected with respect to water sewerage pipelines and electricity
  - Involvement and continuous consultation of key stakeholders and community members with respect to water pipelines and electricity at all stages of the project cycle
  - Use of an integrated approach in planning public utilities by sharing most transport corridors for roads water sewerage electricity lines etc
  - Provision of employment in the project for the squatters where possible

Put in place a grievance redress mechanism as discussed in chapter seven (7) of this report

Material sites and material haulage

 Environmental impact assessments (EIA) to be undertaken prior to extraction of materials from identified sites and approved by NEMA

Operations of the materials sites to be guided by respective management plans established and approved under the ESIA

Material extractions and delivery should only be done during the day

If borrow pits and quarries are operated they be fenced off

Proper handling and management of liquid effluent and used waste oil to forestall incidence of surface water bodies

Any abstraction of water from the existing river systems or from boreholes should be undertaken after acquisition of the prerequisite licenses

- Rehabilitation of materials sites to take place upon exhaustion (contractors will provide appropriate rehabilitation plans for each material site)
- If commercial material sources are adopted the contractor(s) should ensure due diligence process is followed by the suppliers at all times
- Material extraction and haulage should be done in dump conditions to keep dust low especially if it is located within settled areas

Operational Phase

Noise pollution and • excessive vibrations

 Enforcement of Traffic Act regulations to ensure that all vehicles using the road are in good condition all the time to avoid excessive noise generation

Impacts on flora and fauna

Install speed control measures in town areas

Possible Impacts

Proposed Mitigation measures
and near public institutions

biodiversity

Install no hooting signs in sensitive areas such

as near schools etc

Liaise with KWS to ensure that important wildlife crossing corridors and dispersal areas are not affected

Maintenance of road signs at appropriate areas to warn drivers on wildlife crossing paths

Increased generation storm water Use of storm water management practices that slow peak runoff flow reduce sediment load and increase infiltration

Regular inspection and maintenance of perinanent erosion and runoff control features

Use of vegetated swales filter strips terracing check dams detention ponds or basins infiltration trenches and infiltration basins

Repair works to be carried out in dry weather to prevent runoff of asphalt or cement materials

Loss of human and animal life due to increased road accidents Install speed calming measures next to public institutions towns and settlement

Provide road signages all along the road

Conduct road safety sensitization programmes

Carry out Risk Assessment to identify risk areas and provide appropriate prevention measures

Road safety

Installation and maintenance of speed control and traffic calming devices at pedestrian crossing areas

Installation and maintenance of all signs signals markings and other devices used to regulate traffic specifically those related to pedestrian facilities

Installation and maintenance of all signs signals markings and other devices used to regulate traffic including posted speed limits warnings of sharp turns or other special road conditions

Installation of measures to reduce collisions between animals and vehicles (e g use of signs to alert drivers on road segments where animals frequently cross)

Prepare an emergency preparedness and response plan in co ordination with the local community and local emergency responders

Comply with OSHA 2007 requirements they include

Carrying out Safety Audits

Implementing DOSHS improvement orders

Carrying out EHS Risk Assessments

Involve all the relevant stakeholders during the audit so as to incorporate suggested EHS measures into the report

Occupational health and safety When undertaking road repairs use protective barriers to shield workers from traffic vehicles regulation of traffic flow by warning lights design of the work space to eliminate or decrease blind spots and ensure reduction of maximum vehicle speeds in work zones

Training of workers in safety issues related to road maintenance activities

When undertaking road repairs ensure safe practices for work at night and in other low

#### Possible Impacts

Proposed Mitigation measures

visibility conditions including use of high visibility safety apparel and proper illumination

When repairing the road use asphalt product of appropriate specification and ensure application at the correct temperature to reduce the fuming of bitumen during normal handling

Maintenance of work vehicles and machinery to minimize air emissions

Reduction of engine idling time in construction sites. Use of extenders or other means to direct diesel exhaust away from the operator

Ventilation of indoor areas where vehicles or engines are operated or use of exhaust extractor hose attachments to divert exhaust outside

Carry out Safety Audits

## Soil quality degradation

Rehabilitate borrow areas

Revegetate cleared areas

Ensure proper drainage infrastructure along the

Used oil and spills should be disposed in an environmental friendly manner

## Risk of spread of invasive species

Reduce open gaps in road reserves by planting appropriate tree species suitable for highway or road side tree planting

Monitor composition of species regenerating along road reserves and take prompt actions in case of emergence of invasive species

Carry out routine road reserves maintenance mainly to clear bushes that may harbor invasive species

### Decommissioning Phase

## Noise and vibration

Sensitize workforce including drivers of construction vehicles

Install sound barriers for pile driving activity

Install portable barriers to shield compressors and other small stationary equipment where necessary

Proper maintenance of all equipment

 Workers near high level noise to wear safety and protective gear

### Dust emission

Spray demolished piles of earth with water

Avoid pouring dust materials from elevated areas to ground

Cover all trucks hauling soil sand and other loose materials

Provide dust screen where necessary

## Demolition waste

Use of an integrated solid waste management system i e through a hierarchy of options

Source reduction

Recycling

Composting and reuse

Combustion

Sanıtary land filling

All buildings machinery equipment and others that will not be used for other purposes must be removed and recycled/reused as far as

Possible Impacts

Proposed Mitigation measures

possible

All foundations must be removed and recycled reused or disposed of at a licensed disposal site

Where recycling/reuse of the machinery equipment implements structures partitions and other demolition waste is not possible the materials should be taken to a licensed waste disposal site

Donate reusable demolition waste to charitable organizations individuals and institutions

Site degradation

Implement an appropriate re vegetation programme to restore the site to its original status

Consider use of indigenous plant species in revegetation
