THE ENVIRONMENTAL MANAGEMENT AND CO-ORDINATION ACT

(No. 8 of 1999)

NATIONAL ENVIRONMENT MANAGEMENT AUTHORITY ENVIRONMENTAL IMPACT ASSESSMENT STUDY REPORT FOR THE PROPOSED HANDLING OF HAZARDOUS PETROLEUM/USED/ WASTE OIL FACILITY ON PLOT NO. 319 IN MIKINDANI, MOMBASA COUNTY

INVITATION OF PUBLIC COMMENTS

PURSUANT to Regulation 21 of the Environmental Management and Co-ordination (Impact Assessment and Audit) Regulations, 2003, the National Environment Management Authority (NEMA) has received an Environmental Impact Assessment Study Report for the above proposed project.

The proponent, Tai Lifestyle Limited, proposes to establish a hazardous (used/waste oil) petroleum waste facility on plot No. 319, Mikindani, Mombasa County.

The following are the anticipated impacts and proposed mitigation measures:

Possible Impacts Mitigation measures

- | | |
|---|---|
| Loss of biodiversity | <ul style="list-style-type: none"> • Rehabilitation of the site by planting trees on the sites not in use hence restoring flora and fauna. • The contractor will obtain raw materials for the construction materials from compliant and licensed sources. • The contractor will procure quantities that are sufficient for the intended works only and recycle as far as practical to curtail wastage. • The contractor will commit to extensive use of recycled raw materials as will be appropriate and in a manner that does not compromise the safety of the used oil recycling Plant. • Limit excavations and earthworks to the spatial extent of the project site only. • Minimize earthwork to as minimal as necessary. • Undertake screen planting around the project site and establish ornamental bushes to counter the impact of concrete embankment. |
| Soil erosion, run off and water logging | <ul style="list-style-type: none"> • Implementing soil erosion measures on site to prevent contamination of nearby water sources with petroleum and also applying leveling of the site soil to reduce runoff velocity. • Storing roof water in reservoirs that can be used for general cleaning activities since the vehicles and containers carrying the asbestos should not be cleaned anywhere else but on the site. • The vehicles on site should be restricted to |

| Dust emissions and exhaust emission | <ul style="list-style-type: none"> one side which should be the parking area to minimize soil compaction everywhere on the project site. • Sprinkle site to control erosion via dust. • Apply soil erosion measures such as leveling the project site. • The vehicles on site should be restricted to one side which should be the parking area to minimize soil compaction everywhere on the project site. • In occurrence of any soil excavation activities, they should be planned and work out one at a time and rehabilitated before other section excavations begin. • Dust suppressor through sprinkling of water on the site to reduce dust emission. • Ensure onsite speed limitation of the vehicles coming in and leaving. • Wearing of personal protective equipment to protect the personnel from dust. • Vehicle idling. • Sensitize the vehicle drivers to avoid unnecessary racing activities and switch off their engines whenever not in use. • The contractor will secure the site using appropriate dust screens and replace worn out screens. • Building materials that are likely to produce dust such as ballast shall be sprinkled with water before use. • Dusty surfaces at the construction site will be sprinkled with water. • Schedule dusty activities for less windy conditions. • Employ sound project planning to accomplish generating activities quickly. • Employees will be provided with dust masks. |
| Noise pollution | <ul style="list-style-type: none"> • The noisy drilling works and drilling process will entirely be planned to be during daytime. • Ensure all the machines are maintained in good conditions to reduce noise generation. • Insulation of the generators and heavy machineries on site to reduce the rate of noise pollution to the neighboring community. Reduce hooting by the drivers especially when passing through the neighborhood. |
| Hazardous waste safety and storage | <ul style="list-style-type: none"> • Secure the site to prevent unauthorized persons and to restrict movement. • The workers transporting hazardous petroleum must have the appropriate Personal protective equipment. |
| Management of the petroleum | <ul style="list-style-type: none"> • Proper sealing of containers carrying petroleum to prevent any spillage of petroleum since they are hazardous waste. • Skilled personnel should be put to handle the hazardous waste. • The firm shall not permit any person to work in an environment in which he or she would be exposed to in excess of the prescribed |

Possible Impacts	Mitigation measures
	occupational exposure limit.
Occupational hazards or injuries to the general public	• Reporting of any accidents through the prescription forms provided by the Occupational Health and Safety offices (DOSHS) are in place. • All workers should be provided with protective gears for handling the asbestos waste. • First aid kits should be provided on site and it should be fully equipped and managed by a professional personnel. • The workers on site should have insurance covers. • Adequate sanitary facilities that are cleaned at all times. • Mounting safety signage around the project site to show danger and how no one will be accommodated in the site without proper protective equipment.
Air pollution and dust emission	• Providing adequate PPEs to the staff. • Air monitoring should be done continuously especially in the areas where asbestos are being handled on the site. • Managing the soil that has been contaminated by petroleum and putting it together in well labeled bags. • Adhere to the petroleum transportation guidelines provided by NEMA.
Use of water resources	• All water for use shall be metered to determine consumption levels. • Rain water harvesting is recommended as a measure to provide for water for general cleaning. • Apply and obtain a water abstraction permit from WRA and adhere to the abstraction limits if a borehole shall be drilled on site. • Recycle the treated water from the ETP for non-human consumptive purposes such as firefighting, general cleaning, landscaping etc. • Install low-capacity cisterns in sanitary conveniences to keep flush volumes at minimal.
Health and safety risk	• Ensure general safety of all times. • Providing adequate PPEs for the workers. • Annual environmental audit of the disposal of petroleum waste.
Traffic concern	• Ensure all vehicles calling to the station are accommodated within premises and do not block the road. • Enlighten the delivery and dispatch trucks to observe slow speed when traversing the access road. • The proponent will ensure that the road reserve near the facility is kept clear of traffic.
Emission	• Proper maintenance of vehicles to reduce diesel and petroleum emission to the soil and environment.
Solid waste	• The excavated materials from the pits should be used back to fill the pits to prevent solid waste mishandling.

Possible Impacts	Mitigation measures
	• Only the required amount of materials on site should be used and the residue disposed of to control solid waste generation. • Regularly desludge and maintain the oil interceptor in good working order.
Energy consumption	• Ensuring all electric equipment are switched off while not being in use. • Well organized transportation schedule to reduce unnecessary movements hence conserve energy. • Maintain the standby generator in good working condition to guarantee its efficiency. • Explore energy efficient production technologies in the recycling process. • Procurement of energy savings appliances that have a low energy rating.
Noise pollution	• Sensitizing the drivers to switch off engines when not in use and reduce hooting activities to avoid gunning of the vehicle engines.
Vapor emissions and air quality	• All venting systems and procedures have to be designed according to required standards. • Include vapor recovery systems and carbon filters on vents. • Regular air quality monitoring by a NEMA accredited laboratory will be undertaken to ascertain compliance with Legal Notice No.34,air Quality Regulations, 2014. • Installation of gas detector to detect any leaks that may arise from the recycling process.
Waste land due to project abandonment	• Demolition and disposal of structures, landscape restoration , filling depressions, removing unused equipment, structures and facilities to give room for new activities.

The full report of the proposed project is available for inspection during working hours at:
