1. INTRODUCTION

- 1.1. This Amended Sector Code is the outcome of the deliberations of the AgriBEE Sector Charter Council, following the gazetting of the AgriBEE Sector Code on 28 December 2012 and the establishment of the AgriBEE Sector Charter Council in December 2008. It takes into account opinions expressed at the Indaba and all previous drafts, and the Amended Codes of Good Practice for Broad-Based Black Economic Empowerment ('the Codes'), as published by the Department of Trade and Industry ('**the dti**').
- 1.2. While the **Broad-Based Black Economic Empowerment Act**, 2003 (Act No. 53 of 2003 as amended by B-BBEE Act 46 of 2013 ('the Act') and the Codes has guided the development of the AgriBEE Sector Code, its conception is linked to the joint vision as contained in the Strategic Plan for South African Agriculture ('the Sector Plan') of a united and prosperous agriculture Sector designed to meet the challenges of constrained global competitiveness and low profitability, skewed participation, low investor confidence, inadequate support and delivery systems, and poor and unsustainable management of natural resources. This Amended AgriBEE Sector Code derives directly from the Sector's core objective to ensure increased access and equitable participation in the Sector.
- 1.3. This document has been developed as an Amended Sector Code for the Agricultural Sector in terms of Section 9 of the Act and provides for empowerment in the Sector and it includes the Amended AgriBEE Scorecards for large enterprises and Qualifying Small Enterprises (QSE). Where there is doubt, uncertainty or ambiguity with respect to the interpretation of this Code, the content of the Amended Codes of Good Practice, as published by **the dti**, will prevail.
- 1.4. The diversity and uniqueness of sub-sectors within the agricultural Sector is acknowledged. In this respect, where sub-sector charters are developed, these must not be in conflict with the Codes and, in turn, are encouraged to be consistent and in alignment with this Amended AgriBEE Sector Code.
- 1.5. Targets contained in the Amended AgriBEE Scorecard are based on those contained in the Amended Broad-Based Black Economic Empowerment Codes of Good Practice, as published by **the dti**, as well as on stakeholder inputs, comments and recommendations. Where no substantive reasons for deviation from targets contained in the Codes of Good Practice were put forward by stakeholders, targets have largely remained aligned with those contained in the Amended Codes of Good Practice.

2. SCOPE OF APPLICATION

- 2.1. The scope of the Amended AgriBEE Sector Code shall include any Enterprise which derives more than 50% of its turnover from:
- (a) the primary production of agricultural products;
 - (b) the provision of inputs and services to Enterprises engaged in the production of agricultural products;
 - (c) the beneficiation of agricultural products whether of a primary or semi-beneficiated form; and
 - (d) the storage, distribution, and/or trading and allied activities related to non-beneficiated agricultural products.
- 2.2. Where an Enterprise trades in more than one sector i.e. falls under more than one Sector Code, the Measured Enterprise must be guided by the principles embodied in the Amended Codes of Good Practice (refer to statement 003 of Amended Codes of Good Practice).
- 2.3. Despite paragraph 2.1 and 2.2 above, the AgriBEE Charter Council may in consultation with the measured entity, Minister of Agriculture, Forestry and Fisheries and Minister of Trade and Industry determine that the measured entity should fall under the scope of the AgriBEE Sector Code.
- 2.4. This Amended Sector Code applies to multinationals whose business falls within the scope of the Code as defined in this section. Where a specific regime for multinationals exists in the Amended Codes of Good Practice, this regime will apply.
- 2.5. Enterprises as defined in paragraph 2.1 above should measure their contributions to the elements of broad-based BEE as contained in the Amended AgriBEE Scorecard.
- 2.6. Notwithstanding paragraph 2.5, Enterprises with an annual total revenue of between R10 million and R50 million qualify for BEE compliance measurement in terms of the Amended AgriBEE QSE Scorecard (Black QSEs don't have to be measured). However, it should be noted that the Minister may, by notice in the Gazette, adjust the thresholds following appropriate benchmarking studies, sub-sector inputs, other relevant information and consultation with the major stakeholders in the sector.

- 2.7. Notwithstanding paragraph 2.5 and 2.6 above Enterprises with an annual total revenue of less than R10 million, will be classified as Exempted Micro Enterprises ('EMEs'). EMEs will enjoy a deemed BEE recognition Level 4 (as defined in the Amended Codes of Good Practice), and sufficient evidence of qualification as an Exempted Micro-enterprise is a sworn affidavit or Companies and Intellectual Property Commission (CIPC) issued certificate. However, EMEs are encouraged to contribute to transformation in agriculture, particularly in the areas of skills development and socio-economic development; and are therefore incentivised to increase their BEE status by adopting this Amended AgriBEE Sector Code directive for EMEs to move from Lower Levels, to Higher Levels. Black EMEs and QSEs automatically qualify for level 1 (those that 100% Black owned) and 2 (those that are at least 51% Black owned).
- 2.8. The AgriBEE Sector Charter Council must review and adjust the revenue thresholds for QSEs and EMEs every two (2) years in line with relevant economic indicators and in expectation of **the dti's** revision of the Sector Code.

3. OBJECTIVES

- 3.1. The objectives of the Act are to facilitate Broad-Based Black Economic Empowerment by:
- (a) promoting economic transformation in order to enable meaningful participation of black people in the economy;
 - (b) achieving a substantial change in the racial composition of ownership and management structures and in the skilled occupations of existing and new Enterprises;
 - (c) increasing the extent to which communities, workers, co-operatives and other collective Enterprises own and manage existing and new Enterprises and increasing their access to economic activities, infrastructure and skills training;
 - (d) increasing the extent to which black women own and manage existing and new Enterprises, and increasing their access to economic activities, infrastructure and skills training;
 - (e) promoting investment programmes that lead to broad-based and meaningful participation in the economy by black people in order to achieve sustainable development and general prosperity;
 - (f) empowering rural and local communities by enabling access to economic activities, land, infrastructure, ownership and skills; and

(g) promoting access to finance for black economic empowerment.

3.2. The objectives of this Amended AgriBEE Sector Code are to facilitate Broad-based Black Economic Empowerment in the agricultural Sector by implementing initiatives to include Black South Africans at all levels of agricultural activity and Enterprises by:

- (a) promoting equitable access and participation of Black People in the entire agricultural value chain;
- (b) de-racialising land and Enterprise ownership, control, skilled occupations and management of existing and new agricultural Enterprises;
- (c) unlocking the full entrepreneurial skills and potential of Black People in the Sector;
- (d) facilitating structural changes in agricultural support systems and development initiatives to assist Black South Africans in owning, establishing, participating in and running agricultural Enterprises;
- (e) socially uplifting and restoring the dignity of Black South Africans within the Sector;
- (f) increasing the extent to which communities, workers, co-operatives and other collective Enterprises own and manage existing and new agricultural Enterprises, increasing their access to economic activities, infrastructure and skills training;
- (g) increasing the extent to which Black Designated Groups own and manage existing and new agricultural Enterprises, increasing their access to economic activities, infrastructure and skills training;
- (h) empowering rural and local communities to have access to agricultural economic activities, land, agricultural infrastructure, ownership and skills;
- (i) the improvement of living and working conditions and promotion of decent living and working conditions for farm workers; and
- (j) improving protection and standards of land rights and tenure security for labour tenants, farm workers and other vulnerable farm dwellers and addressing the inherently paternalistic nature of relationships associated with insecure tenure by promoting more permanent forms of tenure with the emphasis being on the transfer of ownership of land.

4. DETERMINATION OF AgriBEE STATUS

4.1. The BEE status of an Enterprise that falls within the scope of application of the Amended AgriBEE Sector Code will be determined by the Enterprise's score on the Amended AgriBEE Scorecard. The Amended Scorecard consists of the following five key elements:

- (a) Ownership (Equity & Land Ownership);
- (b) Management control;
- (c) Skills development;
- (d) Enterprise and Supplier Development; and
- (e) Socio-Economic Development.

Amended AgriBEE Scorecard

4.2. The Amended AgriBEE Sector Code (Scorecard) enjoys equal status with that of any other code, including the Amended Generic Codes of Good Practice.

4.3. Measurement Principles:

- (a) A Measured Enterprise's score for a particular indicator is calculated by dividing the enterprise's actual contribution (as described by the relevant indicator) by the corresponding target.
- (b) The result is multiplied by the corresponding indicator weighting points to obtain a score for that indicator.
- (c) Where the enterprise attains a score in excess of the indicator weighting points, the enterprise shall only be entitled to the corresponding weighting points.
- (d) The score for an element is the sum of indicator scores under that element.
- (e) A Measured Enterprise's overall BEE score will determine its BEE status and BEE procurement recognition level.

BEE Status	Qualification	BEE procurement recognition level
Level One Contributor	≥100 points on a broad-based BEE Scorecard	135%
Level Two Contributor	≥95 points but <100 points on a broad-based BEE Scorecard	125%
Level Three Contributor	≥90 points but <95 points on a broad-based BEE Scorecard	110%
Level Four Contributor	≥80 points but <90 points on a broad-based BEE Scorecard	100%
Level Five Contributor	≥75 points but <80 points on a broad-based BEE Scorecard	80%
Level Six Contributor	≥70 points but <75 points on a broad-based BEE Scorecard	60%
Level Seven Contributor	≥55 points but <70 points on a broad-based BEE Scorecard	50%
Level Eight Contributor	≥40 points but <55 points on a broad-based BEE Scorecard	10%
Non-Compliant Contributor	<40 points on a broad-based BEE Scorecard	0%

- 4.4. The gazetting of an Amended AgriBEE Sector Code for the Agricultural Sector, in terms of Section 9 (1) of the Act, is evidence of the commitment by all stakeholders to promote Broad-Based Black Economic Empowerment in the Agricultural Sector.

5. PRIORITY ELEMENTS, SUBMINIMUM AND DISCOUNTING PRINCIPLE

5.1. Priority Elements and Subminimum

5.1.1. Ownership

The sub-minimum requirement for ownership (equity) is 40% of Net Value (40% of the 8 points) based on the Time Based Graduation Factor as provided in Annexure 100(E) of Amended Codes of Good Practice.

5.1.2. Skills Development

The sub-minimum requirement for Skills Development is 40% of the total weighting points excluding any bonus points for Skills Development.

5.1.3. Enterprise and Supplier Development

The sub-minimum requirement for Enterprise and Supplier Development is 40% for each of the three categories excluding any bonus points, within the Enterprise and Supplier Development element, namely Preferential Procurement, Supplier Development and Enterprise Development.

5.2. **Compliance to priority elements**

5.2.1. A Large Enterprise is required to comply with all the Priority Elements;

5.2.2. A QSE is required to comply with Ownership as a compulsory element, and either Skills Development or Enterprise and Supplier Development

5.3. **Discounting principle effects**

5.3.1. Non-compliance with the 40% sub-minimum requirements of any of the priority elements will result in the following outcomes for both Large Enterprises and QSEs:

5.3.1.1 The actual points scored by the Measured Entity and the consequent level that the Measured Entity would have achieved were it not for non-compliance with the 40% sub-minimum requirements will be recognised by the Verification Agency (the Recognition Level).

- 7.2.1.8 Despite 7.2.1.7 above, entities whose ownership of land is separate from enterprise equity ownership, i.e. owned and managed under two different legal entities, must comply with the ownership element.

Agri-Industry undertakes to: -

- (a) Further Black participation through ownership in the Agri-Industry by increasing the level of entitlement of Black People to participate in the Economic Interest and Exercisable Voting Rights in existing and new Enterprises. 1. FOREWORD

South Africa's system of protected areas is established in the National Environmental Management Protected Areas Act, 2003 (Act No. 57 of 2003). The IUCN World Commission on Protected Areas (IUCN-WCPA) developed a framework for assessing management effectiveness of protected areas according to a process with six distinct stages: (i) establishing the context of existing values and threats, (ii) progressing through planning, (iii) allocating resources, (iv) implementing actual management actions (process), (v) producing outputs, that in turn result in (vi) impacts or outcomes. The Department of Environmental Affairs (DEA) following the introduction of the Management Effectiveness Tracking Tool (METT-SA) to track protected area management effectiveness, has identified cultural heritage survey, inventory, planning, and condition assessment in relation to planned objectives as a gap in the management of cultural heritage resources in Protected Areas in South Africa. This comes in response to concerns among protected area professionals, that many protected areas are failing to achieve their objectives and may be losing the values for which they were established.

Article 4 and 6(2) of the *Unesco 1972 Convention concerning the Protection of the World Cultural and Natural Heritage* (hereinafter referred to as "*the World Heritage Convention*" or "*the Convention*") gives State Parties to the Convention the responsibility to, amongst others:

ensure the identification, nomination, protection, conservation, presentation, and transmission to future generations of the cultural and natural heritage found within their territory, and give help in these tasks to other States Parties that request it;

The White Paper on Arts, Culture and Heritage (1996) states: "Access to, participation in, and enjoyment of the arts, cultural expression, and the preservation of one's heritage are basic human rights, they are not luxuries, nor are they privileges."

As the custodian of the National Environmental Management: Protected Areas Act, 2003 (Act No. 57 of 2003), DEA recognized the importance of heritage resources as part of the natural heritage landscape and thus developing this *Cultural Heritage Survey Guidelines and Assessment Tools for Protected Areas in South Africa* is meant to facilitate effective management of cultural heritage resources in Protected Areas.

2. INTRODUCTION

South Africa has a diverse heritage —ranging from palaeontological, archaeological sites, historic buildings, structures, graves, sacred spaces, liberation spaces and memorials, traditional itineraries and routes, streetscapes, townscapes and landscapes. Within the Protected Areas, the protection and conservation of cultural heritage resources are as important as that of the natural heritage resources (flora and fauna).

The NHRA aims to protect the heritage resources from incompatible development and neglect, and conserve it for the benefit of the community and for future generations. Better management of cultural heritage resources in Protected Areas will also result in better biodiversity management.

Cultural heritage values (significance) as outlined in the NHRA, refers to qualities and attributes possessed by places or objects: these values can be aesthetic, architectural, historical, scientific, social, spiritual, linguistic or technological value or significance; for the past, present and future generations. These values may manifest themselves in places and physical features but can also be associated with intangible qualities such as peoples associations with or feelings for a place or item or other elements such as cultural practices, knowledge, songs, legends and stories.

Natural elements of the landscape may also acquire meaning for a particular group may acquire meaning, such as the declaration of individual trees as protected under the National Forests Act, 1998 (Act No. 84 of 1998). These may also include but not limited to land forms, flora, fauna and minerals. The NHRA in its definition of the national estate provides context to the above by recognising landscapes and natural features of cultural significance.

Cultural heritage resources can be affected by natural and human impacts. There is, therefore, a need to have an idea of the potential threats to the heritage resources and impacts of previous actions. Each site is unique hence the need to record and document them and their conditions.

In Protected Areas natural and cultural heritage are inextricably intertwined. They form a continuum rather than being separate entities. The interaction between the natural and cultural heritage values of a protected area add richness and depth to the experience of the place.

Section 9 (2) of the NHRA requires all branches of the State and supported bodies to, on the request of a heritage resources authority, make available for its use and incorporation into its database any information which it has on record on heritage resources under its control. Section 9 (2) provides for all State funded bodies to assist heritage resources authorities in looking after heritage resources in their care. This provision also applies to Management Authorities of Protected Areas.

Heritage Value (significance)

Heritage value answers the question, “why is this cultural resource important?” Heritage value refers to the importance people attach to a place for its ability to tell stories about the past that we want to preserve, share and pass on to future generations. A place’s heritage value can be related to things such as:

- its age or connections to people, events or themes that were important in the community’s history and development;
- its ability to contribute to a sense of social identity or to express a traditional way of life;
- its style, design, materials, construction techniques or workmanship; or
- its ability to further our understanding of the past through scientific study.

Because heritage value is found in the meanings that a cultural resource holds for people, historic places can have more than one heritage value. They can also be valued for different reasons by different groups in the community. Notions of heritage value can also change over time as society’s values, norms and concerns evolve.

Understanding heritage value is the basis of good conservation practice. If we understand a place’s heritage value, the elements of the place that embody and express its heritage value (i.e. its character-defining elements) can be identified and protected.

3. PURPOSE OF THE CULTURAL HERITAGE SURVEY GUIDELINES AND ASSESSMENT TOOLS

The Convention on Biological Diversity (CBD) in its call for National Biodiversity Strategy and Action Plans has emphasized the need for a systemized approach to planning and establishment of protected area networks that conserve a representative sample of a countries biodiversity. Assessing and improving management effectiveness is a priority in the conservation field, increasingly required by national governments and in international instruments such as the Convention on Biological Diversity Programme of Work on Protected Areas (POWPA), which in its 2004 Programme of Work on Protected Areas set targets for countries to implement management effectiveness assessments of portions of their national protected area systems.

Article 6 of the CBD calls on parties to (a) develop national strategies, plans or programmes for conserving and sustainably using biological diversity; and (b) to integrate, as far as possible, the conservation and sustainable use of biological diversity into relevant sectoral or cross sectoral plans, programmes and policies.

A cultural heritage survey should define, at its very origins, the fundamental reason for its existence-its basic purpose and objectives-in a statement that is, in effect, the 'guidelines' of the endeavour

The purpose of the *Cultural Heritage Survey Guidelines and Assessment Tools for Protected Areas in South Africa* is to enable managers of Protected Areas to work within the ambit of the current heritage management systems¹ according to set standards and best practice to effectively manage and conserve cultural heritage resources of the National Heritage Resources Act, 1999 (Act No.25 of 1999) in the quest to improve and sustain the management of cultural heritage resources within Protected Areas in South Africa.

4. OBJECTIVES OF THE CULTURAL HERITAGE SURVEY GUIDELINES AND ASSESSMENT TOOLS FOR PROTECTED AREAS IN SOUTH AFRICA

The objective of the Cultural Heritage Survey Guidelines and Assessment Tools for Protected Areas in South Africa are:

- a) To support the implementation of the NHRA in the identification and protection of places of cultural heritage significance in Protected Areas.
- b) To provide basic means of ensuring that those who manage and work in Protected Area are:
 - i. Aware of the cultural heritage resources in their Protected Areas;
 - ii. Have knowledge of the value (significance) of the cultural heritage resources in the Protected Area;
 - iii. Have knowledge to conduct basic recording of cultural heritage resources in the Protected Area;
- c) Fulfill the basic requirements of the National Heritage Resources Act and other relevant and related legislations.

These guidelines may be of interest to any group or organisation wishing to undertake a systematic heritage investigation of a geographic area. Equally important to consider, are other relevant and related legislations like the National Forests Act, 1998 (Act No. 84 of 1998) particularly the provisions of Section 12.

5. OUTLINE OF THE CULTURAL HERITAGE SURVEY GUIDELINES AND ASSESSMENT TOOLS FOR PROTECTED AREAS IN SOUTH AFRICA

The Cultural Heritage Survey Guidelines and Assessment tools consist of four (4) sections outlined as follows:

Section One: Guidelines on how to carry out a cultural heritage survey to identify heritage resources in a protected area. This section will also outline the requirements as indicated in the NHRA for the three tiers² of Government.

Section Two: Provides basic survey forms to be used to conduct surveys in protected areas.

- a) Site Report Form A:
- b) Assessment of Significance Form B;
- c) Condition Assessment Form C and
- d) Inventory Record Form D.

Section Three: Provides guidelines on inventorying and documentation of cultural heritage sites, the basic recording of an individual site and the requirements of the NHRA.

Section Four: Provides basic inventory forms for various heritage properties:

- a) Immovable cultural heritage resources recording form A2 (generic)
- b) Movable cultural heritage resources recording form B2.
- c) Intangible cultural heritage resources recording form C2
- d) Cultural landscapes recording form D2.

6. CULTURAL HERITAGE MANAGEMENT IN PROTECTED AREAS

The 5th World Parks Congress in 2003 (Durban, South Africa) was a watershed event in the global debate about the role of protected areas in society, producing the Durban Accord, which enshrined the rights and responsibilities of indigenous peoples and local communities in creating and managing protected areas.

FIGURE 1: Key strategic stages for cultural heritage management in Protected Areas

Community involvement is specified at key steps in the management effectiveness assessment process, such as identifying site values, ranking threats, identifying stakeholder relations and developing management plans for the site.

Cultural heritage resources also need effective management not because they are protected by law but are essentially non-renewable and often perishable and their neglect may also impact negatively on the biodiversity in the Protected Area thus in order to have effective management of the cultural heritage resources in a Protected Area there is need to understand what is it you are managing.

According to the NHRA, heritage resources can be protected and managed at local, provincial and national levels. Section 7 (1) of the NHRA makes provision for cultural heritage significance at the three levels of government and national significance being the highest.

FIGURE 2: Type of cultural heritage resources**PICTURE 1: Iron smelting furnace****Picture 2: Xibelani Tsonga Traditional Dance****PICTURE 3: Rock engravings****PICTURE 4: San rock art paintings**

Investigating and identifying places of cultural heritage significance in the Protected Areas is the first step towards conserving them. We start by looking at the general heritage surveys which need to be carried out in the Protected Area and then also discuss inventorying and documentation of individual sites and places.

7. HERITAGE ASSESSMENT CRITERIA AND GRADING

Grading is an important step in the process towards the formal protection of a heritage resource, such as a declaration as a National Heritage Site, Provincial Heritage Site, or, in the case of Grade III heritage resources, the placing of a resource on the Heritage Register. It is not an end in itself, but a means of establishing an appropriate level of management for the process of future formal protection.

Section 7 (1) of NHRA distinguishes between at least three grading categories:

- (a) **Grade I:** Heritage resources with qualities so exceptional that they are of special national significance;
- (b) **Grade II:** Heritage resources which, although forming part of the national estate, can be considered to have special qualities which make them significant within the context of a province or a region; and
- (c) **Grade III:** Other heritage resources worthy of conservation,

At the national level the South African Heritage Resources Agency (SAHRA) administers national or Grade I heritage resources and monitors the management of the national estate. SAHRA maintains a database of the National Estate which is known as the South African Heritage Resources Information System (SAHRIS). Provincial Heritage Resources Authorities set up Heritage Registers, to list and formally recognise heritage resources of provincial (Grade II) and local significance (Grade III), which are incorporated into the Inventory of National Estate (SAHRIS).

A Protected Area should have its own database of heritage resources and make it available for inclusion in the Heritage Register and the Inventory of the National Estate as required in terms of Section 9 of the Estate.

In terms of the NHRA grading may only be carried out by the responsible heritage resources authority, or, in the case of a Grade III heritage resource, by the relevant local authority, if it is competent to do so.

8. CULTURAL HERITAGE SURVEY

8.1. What is a cultural heritage survey?

A heritage survey is the basic technique which can be used to identify and record the cultural heritage resources in any given area such as a Protected Area. This is also the first step in understanding what you are managing and its nature. These cultural heritage resources are likely to include places, such as archaeological sites, cultural landscapes, sacred sites, that are of cultural heritage significance to local communities and the nation. Different survey skills, methods and knowledge are required for different heritage resources for example, surveying a colonial building in the City of Tshwane Metropolitan Municipality will be different from surveying a sacred traditional pool in the heart of a village in Mpumalanga. Heritage resources are not just archaeological remains these are but a small part of the cultural heritage resources.

A survey of cultural heritage resources will generally combine uses of oral interviews and historical / archival research, historical documentary research and fieldwork. Given that cultural heritage resources are assets of local communities the survey also offers an opportunity to engage them in the process. The result of the survey is a basic record and inventory of the cultural heritage resources found in the Protected Area. This basic record of the cultural heritage resources in the Protected Area provides the baseline data for use in the development of management plans and the Management Effectiveness Tracking Tool (METT) assessment.

FIGURE 3: Mapungubwe Cultural Landscape

8.2. Why do a heritage survey?

Surveys are conducted so as to identify all heritage resources and to quantify and describe their significance and that of their environs for better management. The results of a heritage survey can be used by all three tiers of government to make decisions about heritage protection, such as which places to enter into a local, provincial or national heritage register. In a Protected Area, the results of a survey

are important for management to make an informed decision to ensuring that heritage is adequately protected.

The resultant inventory (database) is important for protected area management. It is the basis of which management and strategic decisions on issues of heritage resources grading and declaration (according to NHRA) are taken leading to prioritization in terms of protection, conservation and promotion of that heritage resource.

8.3. When should a heritage survey be carried out?

A heritage survey is best carried out before a review of development planning or any activity which may result in impact (geological, climatic and environmental) on the cultural heritage resource. In the case of Protected Areas, setting up or conducting a management planning exercise will apply. Once

a survey has been carried out and resulted in a Protected Areas inventory of cultural heritage resources under its care, an audit or review of the register should be carried out every five years. In Protected Areas where surveys have never been undertaken, it is essential that they are carried out and then followed up every five years (in line with the review of the Protected Area's management plan) or as can be determined by the management authority.

8.4. Who should be involved?

Heritage surveys are most successful when they are strongly supported by the Provincial Heritage Resources Authority (PHRA), and local government and involve the local community. In Protected Areas, the buy-in from Park Management and the relevant Provincial Departments of Environment is essential. Interested and relevant people who will champion the survey should be identified at an early stage. It is important that all the staff members in the Protected Area understand the cultural heritage and therefore their involvement in the survey is key. The role of co-ordinating the survey cannot be relegated to an external expert, it must be done by officials of the Protected Areas. The local community living in and around the Protected Area are also important in identifying heritage resources.

8.5. Heritage Survey Method

The heritage survey method set out in this document provides a guiding structure and may be adjusted to suit local context and circumstances. Method is whether or not the system should be manual or computerized.

1. Preparation

Key elements in preparing for a heritage survey

- a) Establish a team and its leadership. Consider the skills in your team and what you might require. Do you have people who can read maps and use GPS? Establish who has what knowledge in terms of the possible cultural heritage you might have. Equally important in a Protected Area is knowledge of cultural significance of some of the fauna and flora for example indigenous forests, trees, plants (as a group or individual) might have cultural significance apart from their biodiversity value.

- b) Identify existing expertise and resources available in-house or within the community that could contribute to the survey. Consult knowledgeable people and local histories to get an overview of major historical themes, events and people.
- c) Establish the methodology: Are you going to systematically work in the protected area or are you going to rely on information provided by people?
- d) Consult SAHRA, PHRA and the provincial department of environment about support available for organising the survey. It may be possible to partner and share information and resources. As SAHRA maintains the national database (SAHRIS) it is important to consult them for information on the proposed survey. Request a copy of information relating to the survey area, which is already registered in the SAHRIS or the relevant Provincial Heritage Register. The survey leader will also be able to access this information from the SAHRIS database. Where required, the SAHRA or the relevant PHRA can offer advice about tools and systems used for a heritage survey.

2. Systems

- a) Define the scope of the survey, including the geographical area to be investigated (if a Protected Area is big consider different sections), and prepare a project plan. You may divide the Protected Area into zones or sample areas. Groups might be allocated to these zones or sample areas to record. Whilst consultants might be used, protected area staff should be part of the team otherwise they will never know what cultural heritage resources are contained within the Protected Area.
- b) Establish a recording system which is easy and compatible with the SAHRIS database (**Inventory Record form D**). Keep systems simple and use standard forms to record information on heritage places. SAHRA has created a national database system which can be accessed through www.sahra.org.za/sahris/sahris. Thus it's easier to use this system than creating a new one. This will ensure that your data is compatible with the national database.

3. Desktop research

- (a) Check with the local authorities, PHRAs and SAHRA (SAHRIS database) for already recorded sites.

- (b) Previous records containing information on the cultural heritage resources should be searched including oral history, tradition, drawings, photographs, published and unpublished accounts and descriptions, and related documents pertain to the origins and history of the Protected Area.
- (c) Familiarise your team with the National Heritage Resources Act, 1999 (Act No. 25 of 1999); National Environmental Management: Protected Areas Act, 2003 (Act No. 57 of 2003), National Forests Act, 1998 (Act No. 84 of 1998), National Environmental Management Act, 1998 (Act No. 107 of 1998);

4. *Basic tools*

The basic tools required for heritage survey are as follows:

- a. Topographic map(s) of the Protected Area. If you have access to aerial photos this will be better.
- b. A Global Positioning System (GPS) or compass (bear in mind that Smartphones and Tablets may have these already).
- c. Digital Camera and a scale (again some Smartphones and Tablets do have these!)
- d. Notepad and sketching pens
- e. Recording forms (**Site Report A and Inventory Record form D**).

5. *Field investigation*

- a. Physically locate places and areas and record their coordinates (geographic references.) A GPS can provide you with the position. Use the latitude /longitude referencing system.
- b. Take photographs of all potential heritage resources (places, sites, structures, objects). Remember to include a scale when photographing close-up and a north-arrow.
- c. For each recorded place conduct a mini research on its value (cultural significance) and summarize the information (you may use **Assessment of Significance Form B**).
- d. Check with earlier photos and records if there has been any meaningful visible change of the place. If it's a structure you may also check if there are any maintenance records etc. (use the **Condition Assessment Form C**).

- e. During your field investigation try talking to people who have worked in the area for a long time for their observations might help in evaluating the condition or the value of the area.
- f. Plot the location of places on your map(s) or aerial photos. If you have a tablet you can plot the sites during the field investigation.
- g. Once you have collected information ensure that the forms and all information are captured in your computer and file the paper versions.

Keep a field diary with photo numbers, times etc. so that you can tie the varied datasets together.

6. Results

The survey will result in a "Protected Area Heritage Register" consisting of the following.

- a) An inventory record of cultural heritage resources (**forms A and D**)
- b) Location and distribution maps (geo referenced data) of where the resources are.
- c) Preliminary evaluation of the significance value of the individual sites (**Form B**)
- d) Preliminary evaluation of the condition of the site (**Form D**).

Once the information has been captured and filed, it is important to contact the local PHRA or SAHRA to ensure that an expert can check/ verify and incorporate the inventory to the Provincial Register and the SAHRIS. Costs for the survey as well as the time necessary to complete the effort can vary enormously, depending upon planning decisions taken about the purpose, criteria, products, staff and method.

9. ASSESSMENT TOOLS

9.1. SITE REPORT

In order to accurately report a site, you need to provide information on the area in which the site is located, who owns the land, and the types of artifacts found there. Do the best you can in describing what you or others have found at the site. Attaching drawings or photographs really helps.

SITE REPORT FORM A (preliminary record)

1. **Farm name and number:**.....
2. **History of place:**
(Outline the history of the place. When was it first used or valued)
3. **Description:**
.....
(Give a topographic description of the place. Identify the main physical features and size. Also mention the surrounding).
4. **Illustration:**.....
(Use photographs and diagrams to show the place. You may also use photographs from other sources. Acknowledge the source and ensure that you have the copy right.
5. **Site plans:**.....
(Sketch plans and maps are important not only to show the location but to illustrate some physical features and topography).
6. **GPS co-ordinates: E**.....**N**.....
7. **Current use:**
(Describe the current use including the intangible aspects such as rituals etc. if any. Also outline previous use. Check for maintenance records etc.)
8. **Sources of information:**
.....
(Published material about the place and where these are to be found. Any interviews, oral histories etc, and where are they kept. Indicate all the source for information).

Reporting sites in no way jeopardizes site ownership nor does it mean that a recorded site must be open to the public for visitation. Knowing where sites are means we can avoid destroying them

10. ADDITIONAL ASSESSMENT TOOLS

10.1. Documentation and Inventorying Cultural Heritage Resources

Once the survey in the Protected Area has been conducted, we now have a basic record of the site. This in a way would be the first basic inventory and documentation of the cultural resources. Inventorying and documentation are indispensable tools for the purposes of identification, interpretation and physical preservation of the cultural heritage assets. There are various levels and scope for documentation within the field of heritage depending on the purpose of the exercise. Apart from this, the level is also determined by the scale or scope of the site or object and the type of heritage. Its size and complexity means that the methods to be used must differ. The methods to adopt for an archaeological site, for example are different to those of a cultural or urban landscape or anthropological object.

Section 30(5) of the NHRA requires that inventories of heritage resources should be drawn up by local authorities in certain circumstances and, Section 30(6) of the NHRA enables anyone to compile or draw up an inventory.

The ideal situation of the documentation and inventory of heritage is a multidisciplinary approach. However this is rarely possible since we record the heritage for our specific uses.

FIGURE 4: Documentation and Inventorying Process

10.2 Inventories at National and Provincial levels

Documentation at national level is made through inventories. Inventories can be described as the basic form of recording, but they too can be complex. In this country it is a requirement that heritage properties be inventoried and registered. Thus establishing a basic national recording system or register at national level which can be used to record information. The inventory is then standardized to ensure that users can benefit from the information. SAHRIS is the national inventory and contains the identified sites of heritage significance. It is important to note that the national inventory may not only be used by heritage practitioners, but also by other practitioners e.g. for example for impact assessment and development planning. Thus an inventory is a basic tool for managing heritage resources. It is when properly listed, identified and classified that the protection can be given.

We may think of an inventory as a basic list, but for it to be useful it has to be organized, it needs a method and a standard way of recording information. Perhaps one of the best known heritage inventories in the world today is the World Heritage Tentative List. This record contains basic standardized information on each property that qualifies to be nominated into the World Heritage List. .

For practical purposes, documentation at national level facilitates the following:

We also document at national level so as to make informed decisions on the heritage itself or things around it. The national inventory can help other professionals who are not heritage managers to consider protecting the registered properties when making decisions for local authorities, the public and urban and rural planners. As indicated in the discussion on surveying protected areas, inventorying will

assist in making informed decisions on among others, the biodiversity and visitor management. Cultural heritage resources can enhance visitor experience.

National property inventories form the basis of any impact assessment studies. Thus inventories are useful not just for planning purposes but also as a tool for improved resource management and monitoring effective management.

IMPROVES

Enhanced information retrieval

Provides a common format for heritage records to ensure sharing of data

Promotes consistency within a given system

10.3 Documentation at site level

The reasons for documentation of an object or site varies. It may be for acquiring knowledge needed to advance our understanding of the heritage, its history and values. It could also focus on promoting interest and participation by a wider community. Just as at national level, documentation also helps to make informed decisions on the management and conservation of cultural resources. More specialised interventions or alterations of the physical aspects of the heritage are meant to ensure its protection.

10.4 Management Purposes

At this level documentation should provide enough information for heritage professionals to be able to assess the risks faced. It could also lead to quantifying treatments and providing for the planning of many aspects like impact assessment and rate of deterioration.

INVESTIGATION

When recording for investigation purposes the documentation should enable us to:

- Describe the material and techniques used.
- Indicate the nature and extent of deterioration or alteration.
- Determine what other specialist investigations might be required.
- Record the effects of past management strategies.
- Determine cultural values and their evolution over time.
- Such investigations would also be determined by the needs of the site/object.

10.5 Treatment related

When treatment of a heritage resource is considered is perceived to be necessary then documentation is undertaken. Documentation is therefore deemed to be the initial step in the rescue or mitigation operation. In this case, it is important to produce an accurate record of the current condition before treatment is carried out. This will help in determining the course and nature of treatment and also in identifying priorities. Previous works and treatment operations also need to be documented.

10.6 Value Based Recording

Most documentation records are material focused since the main objective concerns the physical nature of a site or object. This in some instances has limitations in that the site or object may be more important in terms of its significance. The object or place may be of different shape and made of different materials but may for example fulfil some function during a ritual ceremony. Thus any documentation that emphasises the shape or original material will be able to register the essential value of the place or object. There is therefore a need to consider the non -material aspects. It has been stated many times that the tangible can only be interpreted through the intangible. Very often the tangible does not speak for itself and recording the intangible values of a site or object can be challenging particularly if we are working in societies different from our own, as with a Christian recording a Hindu or African religious heritage. As scientists we may also not believe in some of the issues at play, for example, when recording associative cultural landscape, where at times spiritual

areas may be at variance with contemporary ones. The physical dimensions of a sacred forest or even a pool may not be intelligible or logical: they may fluctuate on a seasonal basis. In short how do we document something we don't understand, we cannot see and we don't believe in? This is where multi-disciplinary approaches to recording would be useful.

10.7 Determining the goals and type of documentation

It is easy in the field of heritage management to spend all our time documenting a site or object. There are many examples of projects that concentrate on the production of quality documentation meanwhile the site or object progressively deteriorates. However, in the real world there are limitations in terms of time and resources the first step perhaps in carrying out a documentation or inventory project is to define the goals or objectives of the exercise clearly. Why is it being done? What are the objectives and how will we know that they have been achieved? The objectives or goals will determine what kind of information to collect. Arising from the assessment of the cultural values of the site or object as well as those of management. These objectives and needs should not be determined by technology for example just because we have a photogrammetric camera or a GPS.

POSSIBLE OBJECTIVES FOR DOCUMENTATION:

- Understanding the extent and nature of the site.
- Compiling an inventory of the site in order to update national register.
- Assessing the current condition of the site or object
- Providing planning information to other professionals.
- Assessing management requirements.
- Monitoring changes.
- Extracting information for interpretation.

These are only suggestions. What we need to do is to look carefully at the needs of the particular site or object in question, as well as realistically examine the resources and priorities of the

protected area. When the PA's objectives have been selected, it will be in a position to look at the type of documentation needed and design appropriate recording methods and forms to fulfil its objectives.

Deciding on the objectives will depend on the needs of the Protected Area and the resources available. If there is no adequate record of the site then this will be a high priority, especially if the site is under threat or the record is required by law. If the record provides basic information which is adequate for identification, focus can be on more detailed documentation of the physical conditions. If very little is known about the cultural significance, concentrate on recording that kind of information. Records needs to be assessed from time to time and updated when required.

10.8 Core data recording

However, we need to acquire a basic set of data before we begin working on more detailed ambitious or selective documentation. We will therefore look at the core data standards as well as the general and specific needs of the site or objects. It is also critical to consider who else will want to use the information apart from yourself or your team. How are they going to access the record? Once we have identified the objective of the documentation the next thing is a clear idea of the expected outcomes. After this we can then proceed to choose the methodology. These should be based on the expected use and the level of accuracy required. For example, will a sketch plan be sufficient or will architectural drawings be needed? The question of time must also be considered.

With regard to the documentation of sites, records generally contain basic information as indicated in the form provided for surveying an area for cultural heritage resources: The Museums International Documentation system refers to this as the core data for any site.

At site level specific information on buildings, rock art, cultural landscapes, sacred forests etc. tend to form the bulk of the recording thus they will differ according to type. The information on the preservation, maintenance, etc. will also vary in terms of depth and space.

11.4 CULTURAL LANDSCAPES RECORDING

Cultural landscapes represent the "combined works of nature and of man" designated in Article 1 of the 1972 World Heritage Convention. They are illustrative of the evolution of human society and settlement over time, under the influence of the physical constraints and/or opportunities presented by their natural environment and of successive social, economic and cultural forces, both external and internal.

The term "cultural landscape" embraces a diversity of manifestations of the interaction between humankind and its natural environment. Cultural landscapes often reflect specific techniques of sustainable land-use, considering the characteristics and limits of the natural environment they are established in, and a specific spiritual relation to nature. The protection of traditional cultural landscapes is therefore helpful in maintaining biological diversity.

Cultural landscapes are those parts of the land which have been significantly modified by human activity. The World Heritage List officially recognises cultural landscapes as places of both natural and cultural value. Sites such as Mapungubwe and Richtersveld are listed as cultural landscapes. Many Protected Areas were occupied by people before being protected thus they contain cultural landscapes of heritage significance. Cultural landscapes are areas rather than individual places. They include rural landscapes villages and mining sites, suburbs or urban centres.

CULTURAL LANDSCAPES RECORDING FORM D2

In addition to the minimum requirements specified on core data heritage items involving significant cultural landscapes may require specialised recording techniques.

The recording of cultural landscapes should focus on the relationships between the patterns of human use, the natural environment and cultural beliefs and attitudes. Where such landscapes have been relatively free of recent development it is worthy of recording prior to being altered by major new developments which would obliterate earlier evidence of human use.

Records of cultural landscapes should only be prepared by a professional landscape architect and/or an experienced archaeologist/anthropologist. It should involve an examination of the following characteristics to help "read" the landscape in a systematic manner.

- a) **processes** - spatial pattern, land uses, response to natural features and cultural traditions;
- b) **components** - circulation, boundaries, vegetation, structural types, cluster arrangements, archaeological types, small-scale elements;
- c) **Perceptual qualities** - views and aesthetics.

ADDITIONAL RECORDING TECHNIQUES FOR CULTURAL LANDSCAPES

- aerial photography or satellite imagery (as appropriate).
- topographical mapping showing contours, vegetation, boundaries and circulation patterns.
- identification and recording of significant vegetation and landscape features (by a professional landscape historian).
- identifying areas of archaeological potential or past farming patterns.

12. CONCLUSION

Evaluation of management effectiveness is recognised as a vital component of responsive, pro-active protected area management. Success in applying assessments and integrating monitoring and evaluation into everyday protected area management requires progress on three major issues: *awareness, willingness and capacity*.

Recording cultural heritage (including intangible heritage) is not the end of the story. There will be communities, who have close association with protected areas, who may require access for economic, social or ritual reasons. This becomes an entirely different matter for the managers of Protected Areas. Identification of stakeholders and partners, an understanding of their relationship to the sited and its resources, and a consideration of the level of participation of these individuals, groups or organisation is important in cultural heritage survey.

All **formally protected** resources require that a permit is obtained from the relevant heritage authority in terms of Section 27 of the NHRA before any alteration or disturbance.

All **generally protected** archaeological, palaeontological and meteorite resources require that a permit is obtained from the relevant heritage authority in terms of Section 35 of the NHRA before any alteration or disturbance, or a comment or decision in terms of Section 38 if impacted by any development.

The growing body of work on protected area management effectiveness clearly articulates the linkages between management and governance. Thus, achieving protected area management effectiveness and ensuring governance that is equitable and effective are mutually reinforcing goals.

SCHEDULE

DESCRIPTION OF WATER RESOURCE

The classes and resource quality objectives are determined for all or part of every significant water resource within the catchments of the Mvoti to Umzimkulu as set out below:

Catchments:	Mvoti to Umzimkulu
Drainage areas:	Secondary drainage areas T40 (Mtamvuna) and T52 (Umzimkulu)
River(s):	Major rivers include the Mvoti, uMngeni, uMkhomazi, Umzimkulu and Mtamvuna river systems

A. CLASSES OF WATER RESOURCES AS REQUIRED IN TERMS OF SECTION 13(1)(a) OF THE NATIONAL WATER ACT, 1998

- i. A summary of the water resource classes for integrated units of analysis (IUA) (Figure 1-3) and ecological categories (EC) per biophysical node are set out in Table 1.
- ii. IUAs are classified in terms of their extent of permissible utilisation and protection as either Class I: indicating high environmental protection and minimal utilisation; Class II indicating moderate protection and moderate utilisation; and Class III indicating sustainable minimal protection and high utilisation.
- iii. Table 1 provides the IUA, its water resource classes and its respective catchment configuration. The catchment configuration consists of a number of biophysical nodes representing river reaches or resource units (RUs). The target EC for each RU in the IUA is provided.

B. RESOURCE QUALITY OBJECTIVES OF WATER RESOURCES AS REQUIRED IN TERMS OF SECTION 13(1)(b) OF THE NATIONAL WATER ACT, 1998

- i. Resource Quality Objectives (RQOs) are defined for each prioritized resource unit (RU) for every IUA in terms of water quantity, habitat and biota, and water quality.
- ii. Table 2 to Table 4 provide the RQOs for each RU which is represented by a biophysical node.

- iii. Table 5 represents the water quality RQOs for each IUA for HIGH priority Resource Units represented by EWR sites.
- iv. Table 6 represents the ECs and associated RQOs of Estuaries for water quality, geomorphology, vegetation, invertebrates, fish and birds, respectively to achieve the target EC listed in Table 1.
- v. Table 7 represents the water quality RQOs for each HIGH PRIORITY water quality (WQ) RU. RQOs will apply from the date signed off as determined in terms of Section 13(1) of the National Water Act, 1998, unless otherwise specified by the Minister.

2. RESOURCE QUALITY OBJECTIVES

Resource Quality Objectives for each Resource Unit (RU) are presented in Tables 2 to 7 below. All RQOs are applicable from the date signed off, unless otherwise specified by the Minister.

Table 2 provides an indication of the hydrological RQOs for rivers expressed in terms of flow at the ecological water requirement (EWR) sites. These summarised statistics are representative of the required flow regime in the river where the variability is dependent on the seasonal and temporal pattern of natural flow conditions. The mean monthly flows represent low flow requirements for all the months.

1 nMAR is the natural Mean Annual Runoff in million cubic meters per annum.

2 % nMAR is flow required at the nodes expressed as a percentage of the natural Mean Annual Runoff, Low flows and Total flows.

3 Percentage points on the monthly low flow frequency distribution continuum at the nodes, expressed as the percentage of the months (90% and 60%) that the flow should equal or exceed the indicated minimum values. Note that the detailed flow RQOs are provided in the technical document.

Habitat and biota RQOs are provided as Ecological Categories. There are generic narrative and numerical RQOs associated with the Ecological Categories and Table 3 describes these for each Ecological Category relevant for rivers. Table 4 provides the habitat and biota RQOs for each IUA for HIGH priority Resource Units in rivers.

Table 5 provides the water quality RQOs for each IUA for HIGH priority Resource Units represented by EWR sites. Note that water quality includes both the target EC and the user targets as narrative RQOs.

Table 3 Generic numerical and narrative RQOs associated with RIVER Ecological Categories

Ecological Category	Generic narrative RQO	Instream and riparian habitat narrative RQO	Fish, macroinvertebrate and riparian vegetation narrative RQO	Numerical RQO
A	Unmodified, near natural.	Very similar to natural reference conditions	Assemblage attributes as specified	$\geq A$ ($\geq 92\%$)
A/B	Largely natural with few modifications.	Largely natural with few modifications. The flow regime has been only slightly modified and pollution is limited to sediment. A small change in natural habitats may have taken place. However, the ecosystem functions are essentially unchanged.	Assemblage attributes as specified	$\geq A/B$ ($\geq 88\%$)
B	Moderately modified.	Moderately modified. Loss and change of natural habitat and biota have occurred, but the basic ecosystem functions are still predominantly unchanged.	Assemblage attributes as specified	$\geq B$ ($\geq 82\%$)
B/C	Largely modified.	Largely modified. A large loss of natural habitat, biota and basic ecosystem functions has occurred.	Assemblage attributes as specified	$\geq B/C$ ($\geq 78\%$)
C	Seriously modified.	Seriously modified. The loss of natural habitat, biota and basic ecosystem functions is extensive.	Assemblage attributes as specified	$\geq C$ ($\geq 62\%$)
C/D	Critically / Extremely modified.	Critically / Extremely modified. Modifications have reached a critical level and the system has been modified completely with an almost complete loss of natural habitat and biota. In the worst instances the basic ecosystem functions have been destroyed and the changes are irreversible.	Assemblage attributes as specified	$\geq C/D$ ($\geq 58\%$)
D				$\geq D$ ($\geq 42\%$)
D/E				$\geq D/E$ ($\geq 38\%$)
E				20-39%
F				0-19%

IZINJONGO ZEKHWALITHI YEMITHOMBO

Izinjongo Zekhwalthi Yemithombo zeYunithi Yomthombo ngayinye (RU) zibekwe kumaThebula 2 kuya ku-7 ngezansi. Woonke ama-RQO ayasebenza kusukela ngosuku okusayinwe ngalo njengoba ngaphandle uma kuchazwe nguNgqongqoshe ngenye indlela.

Ithebula 2 linikeza inkomba yama-RQO amanzi emifula echazwe ngokugobhoza okusezingosini zokudingeka kwamanzi emvelo (EWR). Lezi zibalo ezifingqiwe zimelela uhlelo lokugeleza oludingekayo emfuleni lapho ukuhlukahluka kuncike ezimeni zezinkathi zonyaka kanye nezindlela zesikhashana zokugeleza kwemvelo. Ukugeleza okuyinkathazo kwezinyanga zonke kumele ukudingeka kokugeleza okuncane kwezinyanga zonke.

Ithebula 2 IMIFULA: Isifinyezo sama-RQO amanzi ayinhloko
